Games And Decision Making:

Games and Decision Making Charalambos D. Aliprantis, Subir K. Chakrabarti, Sudhir Kumar Chakrabarti, 2000 Students need only a basic understanding of elementary calculus and probability to use the book effectively BOOK JACKET

Decision Making Using Game Theory Anthony Kelly, 2003-03-27 Game theory is a key element in most decision making processes involving two or more people or organisations This book explains how game theory can predict the outcome of complex decision making processes and how it can help you to improve your own negotiation and decision making skills It is grounded in well established theory yet the wide ranging international examples used to illustrate its application offer a fresh approach to an essential weapon in the armoury of the informed manager The book is accessibly written explaining in simple terms the underlying mathematics behind games of skill before moving on to more sophisticated topics such as zero sum games mixed motive games and multi person games coalitions and power Clear examples and helpful diagrams are used throughout and the mathematics is kept to a minimum It is written for managers students and decision makers in any field

Satisficing Games and Decision Making Wynn C. Stirling, 2003-07-03 In our day to day lives we constantly make decisions which are simply good enough rather than optimal Most computer based decision making algorithms on the other hand doggedly seek only the optimal solution based on rigid criteria and reject any others In this book Professor Stirling outlines an alternative approach using novel algorithms and techniques which can be used to find satisficing solutions Building on traditional decision and game theory these techniques allow decision making systems to cope with more subtle situations where self and group interests conflict perfect solutions can't be found and human issues need to be taken into account in short more closely modelling the way humans make decisions The book will therefore be of great interest to engineers computer scientists and mathematicians working on artificial intelligence and expert systems Games, Strategies and
