Slagter, Michelle W. Voss, 2016-05-17 Cognitive training is not always effective This is also the case for the form of cognitive training that this Research Topic focuses on prolonged performance on game like cognitive tasks The ultimate goal of this cognitive training is to improve ecologically valid target functions For example cognitive training should help children with ADHD to stay focused at school or help older adults to manage the complexity of daily life However so far this goal has proven too ambitious Transfer from trained to non trained tasks is not even guaranteed in a laboratory so there is a strong need for understanding how when and for how long cognitive training has effect Which cognitive functions are amenable to game training for whom and how Are there mediating factors for success such as motivation attention or age Are the improvements real or can they be attributed to nonspecific factors such as outcome expectancy or demand characteristics Are there better strategies to improve cognitive functions through game training This Research Topic of Frontiers in Human Neuroscience charts current insights in the determinants of success of game training *Game-Based Learning and the Power of Play* Pauline Rooney, Nicola Whitton, 2016-08-17 In recent years there has been growing interest in the use of games to enhance learning across multiple educational levels and extensive research has shown that games have considerable potential for enhancing learning motivation and skills development However despite a growing acknowledgement of this potential challenges remain and the use of games in formal education contexts remains far from mainstream While some studies identify design and development issues as a key barrier including associated costs others highlight organisational and infrastructural difficulties involved in implementing games in the classroom More recently increasing recognition of these difficulties has led many to explore how gaming elements rather than fully fledged games can be used to engage and enhance student learning a practice now widely referred to as gamification This edited collection of chapters explores the application potential and challenges of game based learning and gamification across multiple disciplines and sectors including psychology education business history languages and the creative arts With contributions exploring the use of games across the full educational spectrum from early childhood education through to the corporate sector it provides comprehensive insights into the potential of games and play for facilitating learning and engagement at every life stage
