the recently identified target antigens of these antibodies and the latest immunocontraceptive development projects The book features chapters on AZPA explaining the biological structure and function of the zona pellucida and describing the abnormality and the antibody It also provides insights into their evolution presenting the differences in taxonomy mammalian physiological functions and the morphologically and immunologically unique human zona pellucida Gamete Immunology is a valuable resource for researchers and postdocs who are curious about new research on ASA and AZPA It offers clinicians and embryologists who are interested in gamete immunology diverse perspectives as well as the basis for new ideas to treat the antibodies and develop contraceptive vaccinogens

Krauchunas,2022-10-18 **Spermatogenesis — Fertilization — Contraception** S. Nieschlag,E. Nieschlag,Ursula-F. Habenicht,2013-04-17 Investigations into the

mechanisms of spermatogenesis sperm maturation and fertilization provide the basis of our understanding of male reproductive physiology Since in recent years molecular and cellular endocrinology has provided particularly important contributions to our knowledge the European Workshops on Molecular and Cellular Endocrinology of the Testis held regularly during even years since 1980 have become a prominent forum for researchers in the field to discuss recent findings and exchange new ideas The most recent of these Testis Workshops the 7th was held on May 5-10 1992 at Castle Elmau in the Bavarian Alps The main lectures of this Workshop form the core of this book In order to provide a broader view of the current status of male reproduction research this volume also contains the proceedings of the Schering Foundation Workshop on Basic Mechanisms of Reproduction and Male Fertility Control which was held in Berlin on October 31 to November 2 1991 The topics of the two meetings were planned to complement each other By combining the proceedings of both workshops it became possible to produce a book that covers a wide spectrum of current highlights in male reproduction research and provides the reader with an up to date review of the field The timeliness of the book is emphasized by the fact that it was already available when the 7th European Testis Workshop took place

The Baboon in Biomedical Research John L. VandeBerg, Sarah Williams-Blangero, Suzette D. Tardif, 2009-06-04 Nonhuman primates have played critical roles in biomedical research and they are among the few animals whose use in research continues to increase The scientific value of nonhuman primates derives from their close phylogenetic proximity to man and their consequent anatomic physiologic and genetic similarities to man Only nonhuman primates can provide adequate models for many complex physiological and disease processes of humans The baboon is a relative newcomer to the repertoire of nonhuman primates used in biomedical research However in less than 50 years since its first use in the U S it has become one of the most popular laboratory primate species It is larger than the other widely used monkey species making it advantageous for many types of experiments and technological developments It is extraordinarily hardy and highly fecund in captivity It closely resembles humans in a variety of physiological and disease processes such as cholesterol metabolism early stages of atherosclerosis and alcoholic liver disease Its chromosomes closely resemble those of humans and many genes of the two species lie in the same chromosomal order Among all primates baboons are the most widely used models for the genetics of susceptibility to complex diseases and they are the first nonhuman primate for which a framework genetic linkage map was established In addition the baboon genome is currently being sequenced and as a result the utility of this species for biomedical research will be dramatically increased

A Comparative Overview of Mammalian Fertilization Bonnie S. Dunbar, M.G. O'Rand, 2013-06-29 In 1964 the Fertilization and Gamete Physiology Research Training Program FERGAP was established at the Marine Biological Laboratories Woods Hole Massachusetts Over the course of the next 12 years under the directorship of Dr Charles B Metz FERGAP brought together trained and inspired a generation of students in reproductive biology from all over the world As students of C B Metz and as FERGAP trainees we would like to dedicate this collected work on comparative mammalian fertilization to our teacher and mentor Dr Charles B Metz Like a number of authors contributing to this volume we have been struck by the significant impact that C B Metz and FERGAP had on the development of students of reproductive biology Applying both the classical and molecular techniques of cell biology and immunology to problems of gamete biology Dr Metz emphasized a comparative

and analytical approach that was reflected in his own research on fertilization in Paramecia sea urchins frogs and mammals It is hoped that this volume will serve to stimulate students to discover the myriad of fascinating research problems in gamete and reproductive biology Bonnie S Dunbar Michael G O Rand Houston Texas Chapel Hill North Carolina ix Contents Part I COMPARATIVE OVERVIEW OF MAMMALIAN GAMETES The Coevolution of Mammalian Gametes 3 J Michael Bedford I Introduction 3 2 Gamete Design 4 2 1 Monotremes 5 2 2 Marsupials 5 2 3 Eutherians 9 3 Gamete Maturation 14 3 1 Oocyte Maturation 14 3 2 Sperm Maturation in the Male 15 Human Embryology and Developmental Biology E-Book Bruce M.
