Meeting, 2004-04-27 The MRS Symposium Proceeding series is an internationally recognised reference suitable for researchers and practitioners Quasicrystals 2003: Volume 805 E. Belin-Ferre, M. Feuerbacher, Y. Ishii, D. Sordet, 2004-03-18 Twenty years after the discovery of a quasicrystalline compound the field of quasicrystals still raises interest and is continuously evolving Quasicrystals display properties different from conventional crystals with small unit cells and present interesting potential for industrial purposes This book offers an updated look into the field of quasicrystalline research For example a report on electrodeposited Al Cu Fe quasicrystals shows great promise for industry It is also demonstrated that when Al Cu Fe quasicrystals are used as catalysts in particular at high temperatures such quasicrystals outperform conventional industrial catalysts A new class of quasicrystal based on a novel type of local order differing from previously observed Mackay and Bergman type quasicrystals is featured A detailed description of layer by layer growth of a Cu film on a quasicrystalline surface is also provided Additional topics include synthesis and structure transport properties electronic properties mechanical properties quasicrystals from metallic glasses surfaces and coatings and applications and hydrogen storage **Thermoelectric Materials 2003: Volume 793** G. S. Nolas, 2004-03-17 The measure of a thermoelectric material is given by the material's figure of merit For over three decades the best thermoelectric materials had a $ZT = 1$ Recently however there are reports of new methods of materials synthesis that result in improvements beyond this performance In addition rapid characterization as well as faster theoretical modeling of thermoelectric materials has resulted in a more rapid evaluation of new materials This book offers a look at these results and provides a benchmark for the current state in the field of thermoelectric materials research and development The focus is on new and innovative directions that will lead to the next generation thermoelectric materials for small scale refrigeration and power generation applications The book emphasizes the multidisciplinary nature of the research needed to advance the science and technology of the field Both theoretical and experimental studies are featured Topics include low dimensional systems and nanocomposites devices oxides skutterudites complex bulk materials and measurements novel approaches and thermoelectric materials and technology **Advances in Chemical-Mechanical Polishing: Volume 816** Materials Research Society. Meeting, 2004-09 The MRS Symposium Proceeding series is an internationally recognised reference suitable for researchers and practitioners This book first published in 2004 presents advances in fundamental understanding development and applications of chemical mechanical polishing CMP Flexible Electronics 2004 - Materials and Device Technology: Volume 814 Materials Research Society. Neudeck, Stephen E. Sadow, 2004-08-24 Silicon carbide SiC is a wide bandgap semiconductor that can operate at temperatures well above 300 C where silicon cannot perform In addition due to a high thermal conductivity equal to copper at room temperature SiC is an ideal candidate for operation in harsh environments and at high power levels Rapid advances in SiC materials and devices have recently resulted in implementation of SiC based electronic systems and the impact of these devices is expected to significantly increase in the next several years This book documents the most recent results on growth of bulk and epitaxial layers physical and structural properties process technology and device development obtained since the 10th International Conference on Silicon Carbide and Related Materials 2003 ICSCRM2003 held in Lyon France Extended defects in silicon carbide are highlighted The nature of defects induced by forward biasing of bipolar devices as well as methods to suppress the degradation are addressed *Biological and Bioinspired Materials and Devices* Materials Research Society. Meeting, 2004 The special interest afforded biological and bioinspired materials and devices lies in the fact that many biological materials as diverse as bone and teeth and spider silk have highly refined and sophisticated platforms of structure that are well organized at hierarchical levels spanning nanoscale to microscale measures There is absolutely strict and precise control of materials synthesis exerted by these natural systems and vigorous study and advancement in the fields of biomineralization molecular biology and DNA technology for instance have brought increasing understanding of such control in ever expanding fashion This knowledge has been quickly transferred into the design and development of synthetic materials that mimic their biological counterparts In this context an explosion in research in the past few years has centered on the identification and synthesis of 1 unique ceramics or composites for biomaterials magnetic and optical use 2 self assembled biopolymeric systems for biomaterials and biosensor application and 3 colloidal and amphiphilic systems for relevance in biomedicine nanotechnology and biosensor fabrication Therefore new nanocrystalline composites nanofibers biosteel fibers novel biosensors distinctive drug delivery systems exceptional tissue engineering scaffolds exclusive molecular imprinting matrices and innovative photonic crystals are suddenly available Given this backdrop the papers in this volume involve biology medicine engineering physics chemistry and materials science Topics include biomineralization and the structure and mechanical magnetic and optical properties of biominerals implant materials for dental maxillofacial orthopaedic urological and ophthalmic applications tissue adhesives and cements material degradation and implant failure organic modification of surfaces and their biocompatibility tissue engineering with cells and scaffolding to generate extracellular matrices for tissue regeneration emerging technologies in tissue engineering including application of stem cells and gene therapy in situ and ex situ characterization techniques and imaging of biomaterials pharmaceutical crystallization and materials for drug and gene delivery supramolecular and biological self assembly and structure and dynamics of organic inorganic interfaces
