Structural and Computational Glycobiology: Immunity and Infection Elizabeth Yuriev, Mark Agostino, 2015-08-04 Interest in understanding the biological role of carbohydrates has increased significantly over the last 20 years The use of structural techniques to understand carbohydrate protein recognition is still a relatively young area but one that is of emerging importance The high flexibility of carbohydrates significantly complicates the determination of high quality structures of their complexes with proteins

Specialized techniques are often required to understand the complexity of carbohydrate recognition by proteins. In this Research Topic we will focus on structural and computational approaches to understanding carbohydrate recognition by proteins involved in immunity and infection. Particular areas of focus include cancer immunotherapeutics, carbohydrate-lectin interactions, glycosylation and glycosyltransferases.

**Carbohydrate-Based Vaccines and Immunotherapies** Zhongwu Guo, Geert-Jan Boons, 2009-06-17. The fundamental science and the latest developments in carbohydrate-based vaccines. The relatively new field of glycoimmunology has emerged from the marriage of glycobiology and immunology in recognition of the important role carbohydrates play as antigenic determinants. *Carbohydrate Based Vaccines and Immunotherapies* comprehensively reviews the state of this exciting field, offering a single source for both the fundamental science and the latest developments. With contributions by leading experts, this resource covers the design, synthesis, evaluation, and applications of various carbohydrate-based vaccines, including polysaccharides, neoglycoproteins, and neoglycolipids. The text approaches vaccine design from a chemical and molecular focus, staying in line with current advances. Key topics covered by *Carbohydrate Based Vaccines and Immunotherapies* include: Recent developments towards clinically useful vaccines against bacteria, viruses, parasites, and fungi; Using adjuvants to improve immunogenicity and/or immunological properties of vaccines; Choosing and designing proper adjuvants for specific targets; Abnormal carbohydrates expressed by tumors; Carbohydrate-based therapeutic cancer vaccines or cancer immunotherapy; Clinical trials results for synthetic cancer vaccines; Glycoengineering of cell surface carbohydrates and its anticancer applications; Using cell surface carbohydrates for disease diagnosis. A single, convenient source of state-of-the-art information from leading authorities in the field. *Carbohydrate Based Vaccines and Immunotherapies* is an essential reference for organic chemists and biochemists, academic researchers, and other students and professionals involved in vaccine design.

**Sialobiology: Structure, Biosynthesis and Function. Sialic Acid Glycoconjugates in Health and Disease** Joe Tiralongo, Ivan Martinez-Duncker, 2013-02-13. This ebook presents a summary of central aspects of sialobiology, i.e. the study of sialic acid and its relevance to biology. The importance of substitution by the sugar sialic acid and the role played by sialylated structures, e.g. glycoproteins, glycolipids, glycoconjugates in immune recognition, neural cell growth, embryogenesis, and disease development, including microbial pathogenesis and cancer progression, has become well established. Since 1995, the field of sialobiology has expanded greatly, as many of the key enzymes involved in sialic acid biosynthesis, as well as the vast majority of sialic acid-binding lectins involved in immune recognition, have only been cloned, characterised, and structurally elucidated after the publication of earlier works on the subject. This ebook also covers these recent developments. Chapters in this ebook have been contributed by eminent sialobiologists. Therefore, a book of this nature is timely and will prove to be a definitive volume with a high impact in this field for glycobiologists and cell biologists.
