Gangliosides in Neurological and Neuromuscular Function, Development, and Repair Maurice M.

Rapport, Alfredo Gorio, 1981 Ganglioside Structure, Function, and Biomedical Potential Robert W. Ledeen, 2012-12-06 This volume contains the proceedings of the symposium on Ganglioside Structure Function and Biomedical Potential which was held at Parksville Vancouver Island B C Canada on July 6 10 1983 The symposium was organized as a satellite to the ninth meeting of the International Society for Neurochemistry held immediately afterward in Vancouver City B C Close to 50 speakers from 9 countries presented papers on a wide range of topics on the ganglioside theme These encompassed the many aspects of basic research that have evolved over the past half century as well as some newer topics relating to the biomedical potential of gangliosides as therapeutic agents One of the purposes of the meeting was to encourage dialogue between investigators in these seemingly diverse areas in the hope that each would come away with fresh perspective toward his own work Judging from the many spirited informed discussions that took place throughout the four day meeting this goal was achieved The charm and beauty of Vancouver Island undoubtedly contributed to the congenial atmosphere which quickly developed among the 120 or so participants Drawn from 13 countries of Europe East and West America North and South Asia and the Middle East this gathering reflected the broad geographical scale on which ganglioside research is now conducted That this field is still in its logarithmic stage of growth is indicated by the increasing number of citations appearing each year in the various abstracts e g fig next page Gangliosides and Neuronal Plasticity G. Tettamanti, Robert Ledeen, K. Sandhoff, Y. Nagai, G. Toffano, 2013-11-11 This volume contains the Proceedings of the Meeting Neuronal plasticity and gangliosides which was held at Mantova Italy on May 29 31 1985 as a satellite to the Tenth Meeting of the International Society for Neurochemistry Riva del Garda Italy May 19 24 1985 The Symposium took place in the Teatro Bibiena one of the oldest and most beautiful theatres in Italy known for having been the place for some of the very first performances of W A Mozart The number of registered participants in the Meeting was about 180 including 40 accompanying persons The persons invited as Speakers or Chairmen of Colloquia and Workshops were 48 Eighteen countries were represented with the largest contingent coming from Italy followed by Federal Republic of Germany The United States France and Great Britain The Meeting was based on Colloquia Workshops Round Tables and Poster Sessions with a total of 42 Lectures and 32 Poster presentations Gangliosides and Modulation of Neuronal Functions Hinrich Rahmann, 2013-06-29 The NATO Advanced Research Workshop on Gangliosides and Modulation of Neuronal Functions was held at the University of Stuttgart Hohenheim Federal Republic of Germany on October 20 24 1986 About 70 participants from 10 countries presented papers on a wide range of topics all concerning the ganglioside theme The content of the workshop consisted of the following chapters 1 Fundamentals for research on function of gangliosides 2 Brain ganglioside metabolism 3 Cell specific distribution and differentiation related expression of brain gangliosides 4 Gangliosides and neuronal plasticity 5 Biomedical potential of

exogenous ganglioside application on neuronal function and 6 Critical assessments on aspects of ganglioside therapy The aim of the workshop was to sum up and discuss the present knowledge in the respective fields Despite intensive research on gangliosides ever since Ernst Klenk discovered them in 1936 the biological function of these amphiphilic sphinx like glycosphingo lipids remains elusive Over the past few years several thousands of articles on gangliosides have been published demonstrating very special properties of these glycolipids and their possible involvement in diverse biological phenomena As far as we know up to the present time these properties may be due to particular physico chemical attributes of these compounds especially in combination with calcium The results obtained so far have shed light not only on possible functional roles of gangliosides with regard to cellular induction and organization but have also unexpectedly opened up a whole new field of therapeutic applications for these compounds

Secretory Systems and Toxins Michal Linial, Alfonso Grasso, Phillip Lazarovici, 2003-09-02 This volume deals with the relationships between toxins and one of the most fundamental processes in any living cell the secretory cycle The reader will find up to date information on secretion generated by experts in this fast evolving field In the last decade extensive molecular and cellular studies have exposed the molecular similarity among

Glycoconjugates Howard J. Allen, Edward C. Kisailus, 1992-04-15 Glycoconjugates Composition Structure and Function provides an excellent overview of the composition biosynthesis function and structure of the carbohydrate chains of glycoconjugates from higher organisms It is recommended as a core reference text providing excellent coverage of the glycoconjugate field

Cell Culture in the Neurosciences Jane Bottenstein, 2012-12-06 A fundamental problem in neuroscience is the elucidation of the cellular and molecular mechanisms underlying the development and function of the nervous system The complexity of organization the heterogeneity of cell types and their interactions and the difficulty of controlling experimental variables in intact organisms make this a formidable task Because of the ability that it affords to analyze smaller components of the nervous system even single cells in some cases and to better control experimental variables cell culture has become an increasingly valuable tool for neuroscientists Many aspects of neural development such as proliferation differentiation synaptogenesis and myelination occur in culture with time courses remarkably similar to those in vivo Thus in vitro methods often provide excellent model systems for investigating neurobiological questions Ross Harrison described the first culture of neural tissue in 1907 and used morphological methods to analyze the cultures Since that time the technique has been progressively modified and used to address an ever widening range of developmental questions In recent years a convergence of new or improved cell culture biochemical electrophysiological and immunological methods has occurred and been brought to bear on neurobiological questions This volume is intended not to be comprehensive but rather to highlight some of the latest findings with a review of previous important work as well in which combinations of these methods are used

The Node of Ranvier Joy Zagoren, 2012-12-02 The Node of Ranvier is a collection of studies about the function morphology and development of the node of Ranvier from experts of

different disciplines The book covers topics such as the evolution of the structure and function of the nodes of Ranvier membrane specialization at the nodes of Ranvier and catch binding Also included in the book are studies about the structural and functional relationships of ion conduction in the myelinated and demyelinated axon functional organization of potassium channels in axons the effects of pathological conditions and toxins on nodes of Ranvier and nodal-like membranes at extranodal sites Physiologists biochemists pharmacologists cell biologists neurologists and neuropathologists who would like to find out more and make a study about the node of Ranvier will find the text helpful and relevant Neurobiology of Glycoconjugates R.K. Margolis, R.U. Margolis, 2013-04-18 This revised and renamed volume reflects a number of important changes in content and emphasis since this field was first surveyed in *Complex carbohydrates of nervous tissue* in 1979 A third of the chapters did not appear in the predecessor volume and more than half have new authors In this expand

Advances and Technical Standards in Neurosurgery L. Symon, J. Brihaye, F. Cohadon, B. Guidetti, F. Loew, J. D. Miller, H. Nornes, E. Pásztor, M. G. Yaşargil, B. Pertuiset, 2012-12-06 As an addition to the European postgraduate training system for young neurosurgeons we began to publish in 1974 this series devoted to *Advances and Technical Standards in Neurosurgery* which was later sponsored by the European Association of Neurosurgical Societies The fact that the English language is well on the way to becoming the international medium at European scientific conferences is a great asset in terms of mutual understanding Therefore we have decided to publish all contributions in English regardless of the native language of the authors All contributions are submitted to the entire editorial board before publication of any volume Our series is not intended to compete with the publications of original scientific papers in other neurosurgical journals Our intention is rather to present fields of neurosurgery and related areas in which important recent advances have been made The contributions are written by specialists in the given fields and constitute the first part of each volume In the second part of each volume we publish detailed descriptions Of standard operative procedures furnished by experienced clinicians in these articles the authors describe the techniques they employ and explain the advantages difficulties and risks involved in the various procedures This part is intended primarily to assist young neurosurgeons in their post graduate training However we are convinced that it will also be useful to experienced fully trained neurosurgeons **Handbook of Essential Fatty**

Acid Biology David I. Mostofsky, Shlomo Yehuda, 2013-03-09 Internationally eminent scientists illuminate the most important scientific aspects of essential fatty acids EFAs from their biochemistry to their physiological consequences in both health and illness The distinguished contributors integrate a wide range of topics including the basic biochemistry of EFAs and lipid metabolism the role of EFAs in the neuronal membrane the effects of EFAs and lipids in various diseases and the effects of normal levels and EFA deficiencies on cognition and behavior The book's consolidation of our knowledge of the biology and metabolism of the EFAs lays the groundwork for dramatic advances in our understanding of these ubiquitous biochemicals and their role in health and illness Current Catalog National Library of Medicine (U.S.), 1982 First multi year cumulation

Skvortsova,2011-06-28 Ischemia is localized tissue anemia due to obstruction of the inflow of arterial blood thus brain ischemia is the condition where insufficient blood is delivered to the brain Many physiological processes occurring in the brain critically depend on the state of its energy metabolism The state of brain energy metabolism in turn depends on the delivery of oxygen and glucose to the brain via the bloodstream Although it comprises only 2% of the total body weight the human brain consumes 20 25% of the oxygen and up to 70% of the free glucose taken in by the body The brain respire more intensively than any other organ of the body The intensity of oxygen consumption by cortical brain tissue much exceeds the demands of other tissues 5 43 mmol O₂ g per h versus 3 06 and 4 02 mmol for heart at rest and intensively working respectively 2 4 mmol for kidneys and 1 8 mmol for liver Oxidative phosphorylation in mitochondria generates 95% of the adenosine triphosphate ATP that is formed in the brain Thus it is clear why insufficiency of oxygen delivery to brain cells adversely affects brain function Glucose is the main energy providing substrate in the brain The basic pathway of its metabolism in neural tissue is aerobic glycolysis **Aging of the Brain and Alzheimer's Disease** ,2011-09-22 *Aging of the Brain and Alzheimer's Disease* *Journal of Undergraduate Research in the Biological Sciences* ,1984 *Progress in Radiopharmacy* P.H. Lazarus,2012-12-06 The contents of this volume are based upon presentations made to the Second European Symposium on Radiopharmacy and Radiopharmaceuticals which was held in St Catharine's College Cambridge in March 1985 This meeting was organized by the Radiopharmacy Group of the British Nuclear Medicine Society under the auspices of the European Joint Committee on Radio pharmaceuticals of the ENMS SNME The Joint Committee acknowledges the special effort which was made by the local organizers to prepare this meeting the quality of which is undoubtedly reflected in the proceedings The wide ranging aspects of Radiopharmacy are reflected in this volume which not only deals with specialized topics such as aerosols and biodistribution studies but which also deals with the professional aspects of Radiopharmacy Practice We are of the opinion that this book complements earlier publications to give an ongoing picture of the practice of Radiopharmacy and the state of the art in Europe As well as acknowledging the contribution of the British Radiopharmacists I would also mention the support of my co chairman Prof Dr M G Woldring the members of the Joint Committee and last but not least Mrs M Busker who prepared the camera ready copy P H Cox Co ordinating Chairman European Joint Committee on Radiopharmaceuticals Rotterdam XI CCNrRIBUTORS Anderson M L Pharmacy department London Hospital London UK Angelberger P Österreichische Forschungszentrum Seibersdorf GmbH Wien Austria Claessens R A M J Department of Nuclear Medicine St Radboud Ziekenhuis Nijmegen The Netherlands **Amyotrophic Lateral Sclerosis** V. March 1985 Health care professionals scientists patients and their families from twenty countries around the world participated in this meeting The objectives of the Varese conference were the following a To provide a forum for the proponents of the various paths of research into ALS b To correlate the useful therapies employed regionally for the purpose of developing a common guide for patients families and supporting professionals c To encourage self examination by the health care professionals into the psychological barriers imposed by a diagnosis of terminal illness for which there is no known cause or cure Not surprisingly there were no announcements of breakthroughs or miracle cures which are nonetheless hoped for in the confrontation of a disease such as ALS It is fair to say however that Varese provided the context for a thorough review of what is known about ALS and we hope that the papers will renew some of the enthusiasm which has characterized this conference The book contains six sections Basic Research Aspects Diagnostic Tools Clinical Management Therapeutic Trials Psychological Aspects and the Epidemiology of ALS Certain aspects such as pathological studies and animal models have not been covered these subjects were partially treated during the informal sessions Nevertheless the large number of papers bears evidence to the growing interest in ALS and to the success of the Varese meeting

Neuropsychological Rehabilitation Nicole v. Steinbüchel, Detlev Y. v. Cramon, Ernst Pöppel, 2012-12-06 The neuropsychological rehabilitation of patients with brain injuries presents a new challenge for medicine and psychology In any society patients who have suffered a stroke or a traumatic brain lesion constitute a large group requiring special therapy even nowadays only a small group of these patients obtain adequate rehabilitational support Brain injuries may lead to loss or impairment of functions like language sight memory attention emotional control or movement and such impairments are usually accompanied by handicaps in the patient's daily life Every attempt should be made to improve functional competence and the patient's capacity to cope with their disability and handicap In recent years the aim of much research in the basic sciences has been to gain insight into the mechanisms of restitution of function partly by trying to understand the pathophysiological mechanisms that are initiated by a traumatic event However in spite of this broad research initiative into recovery of function and the possibilities of cognitive remediation our knowledge is still rather limited with respect to both the neurobiological mechanisms that may underlie functional plasticity and the factors that may account for neuropsychological rehabilitation In spite of these shortcomings we would like to stress that progress can only be expected if an intense research effort is made to unite the concepts and results from the basic sciences with the practical demands of neuropsychological rehabilitation
