**Functional Analysis** Klaus D. Bierstedt, Albrecht Pietsch, Wolfgang M. Ruess, Dietmar Vogt, 1993-09-16 These

proceedings from the Symposium on Functional Analysis explore advances in the usually separate areas of semigroups of operators and evolution equations geometry of Banach spaces and operator ideals and Frechet spaces with applications in partial differential equations

**Several Complex Variables VII** H. Grauert, Thomas Peternell, R. Remmert, 2013-03-09 Of making many books there is no end and much study is a weariness of the flesh Eccl 12 12 1 In the beginning Riemann

created the surfaces The periods of integrals of abelian differentials on a compact surface of genus 9 immediately attach a  $g$  dimensional complex torus to  $X$  If  $g \geq 2$  the moduli space of  $X$  depends on  $3g - 3$  complex parameters Thus problems in one complex variable lead from the very beginning to studies in several complex variables Complex tori and moduli spaces are complex manifolds i e Hausdorff spaces with local complex coordinates  $Z^1 \times \dots \times Z^n$  holomorphic functions are locally those functions which are holomorphic in these coordinates th In the second half of the 19 century classical algebraic geometry was born in Italy The objects are sets of common zeros of polynomials Such sets are of finite dimension but may have singularities forming a closed subset of lower dimension outside of the singular locus these zero sets are complex manifolds

**Several Complex Variables. Maryland 1970. Proceedings of the International Mathematical Conference, Held at College Park, April 6-17, 1970** John Horvath, 2006-11-15 *Complex Analytic Cycles II* Daniel Barlet, Jón

Magnússon, 2025-06-23 This book is the second volume of a work on complex analytic cycles and the results stated without proof in the first volume are proved here It begins with the construction of the reduced complex space formed by all compact cycles of a given complex space Following this construction the main subjects of the book are Fundamental class of a cycle and relative fundamental class of an analytic family of cycles Intersection theory with parameters on complex manifolds and more generally on nearly smooth complex spaces Holomorphic currents on reduced complex spaces Chow varieties and cycle spaces of quasi projective complex spaces Natural morphism from the Douady space to the cycle space Holomorphic convexity in cycle spaces and integration of bar partial cohomology classes on cycles Strong Kählerianity of cycle spaces of Kähler manifolds Numerous important applications of cycle space theory Preliminaries needed in the book in addition to the material of the first volume for instance sheaf cohomology with support are explained in detail making this two volume work quite self contained The French version of the present book was published in 2020 by the French Mathematical Society in the series Cours Spécialisés and during the translation process the authors have in many ways improved the original version

*Encyclopaedia of Mathematics* M. Hazewinkel, 2013-11-11      *Encyclopaedia of Mathematics* Michiel

Hazewinkel, 2013-12-01 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977-1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques

### **Floquet Theory for Partial Differential Equations**

P.A. Kuchment, 2012-12-06 Linear differential equations with periodic coefficients constitute a well developed part of the theory of ordinary differential equations 17 94 156 177 178 272 389 They arise in many physical and technical applications 177 178 272 A new wave of interest in this subject has been stimulated during the last two decades by the development of the inverse scattering method for integration of nonlinear differential equations This has led to significant progress in this traditional area 27 71 72 111 119 250 276 277 284 286 287 312 313 337 349 354 392 393 403 404 At the same time many theoretical and applied problems lead to periodic partial differential equations We can mention for instance quantum mechanics 14 18 40 54 60 91 92 107 123 157 160 192 193 204 315 367 412 414 415 417 hydrodynamics 179 180 elasticity theory 395 the theory of guided waves 87 89 208 300 homogenization theory 29 41 348 direct and inverse scattering 175 206 216 314 388 406 408 parametric resonance theory 122 178 and spectral theory and spectral geometry 103 105 381 382 389 There is a significant distinction between the cases of ordinary and partial differential periodic equations The main tool of the theory of periodic ordinary differential equations is the so called Floquet theory 17 94 120 156 177 267 272 389 Its central result is the following theorem sometimes called Floquet-Lyapunov theorem 120 267

### **Microdifferential Systems in the Complex Domain**

P. Schapira, 2012-12-06 The words microdifferential systems in the complex domain refer to several branches of mathematics micro local analysis linear partial differential equations algebra and complex analysis The

microlocal point of view first appeared in the study of propagation of singularities of differential equations and is spreading now to other fields of mathematics such as algebraic geometry or algebraic topology. However it seems that many analysts neglect very elementary tools of algebra which forces them to confine themselves to the study of a single equation or particular square matrices or to carry on heavy and non intrinsic formula tions when studying more general systems. On the other hand many algebraists ignore everything about partial differential equations such as for example the Cauchy problem although it is a very natural and geometrical setting of inverse image. Our aim will be to present to the analyst the algebraic methods which naturally appear in such problems and to make available to the algebraist some topics from the theory of partial differential equations stressing its geometrical aspects. Keeping this goal in mind one can only remain at an elementary level.

The series is devoted to the publication of monographs and high level textbooks in mathematics mathematical methods and their applications. Apart from covering important areas of current interest a major aim is to make topics of an interdisciplinary nature accessible to the non specialist. The works in this series are addressed to advanced students and researchers in mathematics and theoretical physics. In addition it can serve as a guide for lectures and seminars on a graduate level. The series de Gruyter Studies in Mathematics was founded ca 35 years ago by the late Professor Heinz Bauer and Professor Peter Gabriel with the aim to establish a series of monographs and textbooks of high standard written by scholars with an international reputation presenting current fields of research in pure and applied mathematics. While the editorial board of the Studies has changed with the years the aspirations of the Studies are unchanged. In times of rapid growth of mathematical knowledge carefully written monographs and textbooks written by experts are needed more than ever not least to pave the way for the next generation of mathematicians. In this sense the editorial board and the publisher of the Studies are devoted to continue the Studies as a service to the mathematical community. Please submit any book proposals to Niels Jacob.
