*Gaps and Dummies* Hans Bennis, 2005 Investigation of the syntactic properties of empty categories and dummy pronouns within the framework of Government Binding theory      **Gaps and Dummies** Hans Bennis, 1987-01-01 In this study the syntactic properties of empty categories and dummy pronouns are investigated within the framework of Government Binding theory The assumption that clauses must have a subject is present in most if not all linguistic theories In GB theory the requirement that clauses have a subject is stipulated as a consequence of the base rules or the Extended Projection Principle In this book it is claimed that no such stipulation is necessary The presence of a subject is exclusively determined by the theories of thematic roles and Case This view is supported by the fact that the alleged dummy subjects Dutch *i e er* and *het* show a variety of properties which can only be explained if they are not analyzed as dummy subjects Further confirmation is derived from the fact that Dutch subjectless sentences are found in precisely those circumstances in which neither theory nor Case theory requires a subject to be present Chapter 1 presents a theory of empty categories This theory enables us to explain the distribution of gaps and makes precise and correct predictions with respect to the occurrence of parasitic gaps The non dummy status of *het* discussed in chapter 2 is supported by the fact that it can be the antecedent of PRO reflexives and parasitic gaps and by an asymmetry in wh movement from sentential complements The analysis of *het* leads to a discussion of a variety of constructions including constructions with raising ergative and psychological verbs The adverbial pronoun *er* displays several distinct syntactic functions In chapter 3 it is argued that none of these different functions justifies an analysis of *er* as a dummy subject In chapter 4 some of the consequences of the theory introduced in the preceding chapters are investigated These include a discussion of the status of the subject position in languages such as English Italian French and Spanish the structure of Old English and the status of dummy pronouns in German and English

**Arguments and Structure** Teun Hoekstra, 2008-08-22 This book contains 14 articles by Teun Hoekstra 1953 1998 on core issues in syntactic theory Some articles focus on the structure of DP others on the structure of the sentence as a whole while others still deal explicitly with the parallels between the two The papers are distributed over four sections Argument structure T chains The morpho syntax of verbal and nominal projections and Small clauses More than half of the articles in this book are published here for the first time or appear for the first time in English Hoekstra s work is characterized by a fundamental interest in the central questions of syntactic theory most notably the relation between argument structure and X bar structure This concentrated interest led to a deep understanding of the notion of transitivity with respect to both the status of the external argument and that of the internal argument where status refers to both the content and the licensing In this collection of papers Hoekstra reports on his insights in these matters As far as content and licensing of the external argument is concerned this collection contains papers on the relation between passives and their active counterparts the parallels between possessives and transitives and the differences and similarities between past participles and infinitives As to the internal argument we find papers addressing sentential complementation

verbal affixation and resultatives And there is a whole section on tense and its role in keeping the sentence together One of the papers in this collection is Hoekstra s classic but hitherto unpublished Small clauses everywhere more than 70 pages which summarizes Hoekstra s views on such issues as resultatives particle verbs and double object constructions
