Ecology Earth History:

Ecology and Earth History Richard Nathaniel Twisleton-Wykeham-Fiennes, 2012-02-12 This volume outlines in simple terms the basic concepts of ecology It is not a textbook of ecology but an introduction to the subject and to the more advanced presentations of special aspects that will appear in succeeding volumes There are many excellent textbooks of ecology to some of which the reader is referred and to which the present volume should also serve as a useful primer I have linked this presentation of ecological theory to a survey of present theories of Earth History All of earth history is in a sense ecology Earth s environments have evolved throughout the ages from the time when no life existed just as life forms have evolved from primitive to complex It seems to me therefore that one should understand how these environments have come into being I have also presented a simple account of the energy systems that are used by living things These too need to be understood if we are to appreciate energy problems Man like all other living things requires the energy provided by his food but unlike other creatures his way of life demands additional auxiliary energy and this has introduced a new factor to man s ecology Hitherto most of this auxiliary energy has been obtained from fossil fuels coal oil and uranium But these are not inexhaustible they represent capital not income and it is still not clear what the sources of the auxiliary energy will be
