Econometric Evaluation Of Labour Market Policies:

Econometric Evaluation of Labour Market Policies Michael Lechner, Friedhelm Pfeiffer, 2012-12-06 Empirical measurement of impacts of active labour market programmes has started to become a central task of economic researchers. New improved econometric methods have been developed that will probably influence future empirical work in various other fields of economics as well. This volume contains a selection of original papers from leading experts among them James J Heckman Noble Prize Winner 2000 in economics addressing these econometric issues at the theoretical and empirical level. The theoretical part contains papers on tight bounds of average treatment effects, instrumental variables estimators, impact measurement with multiple programme options and statistical profiling. The empirical part provides the reader with econometric evaluations of active labour market programmes in Canada, Germany, France, Italy, Slovak Republic and Sweden.

Microeconometric Evaluation of Labour Market Policies Marco Caliendo, 2006-01-23 The evaluation of labour market and other public policies has become increasingly important in recent years. In an era of tight government budgets a thorough analysis of these measures is imperative. This book provides a comprehensive overview and assessment of the most relevant microeconomic evaluation methods. It focuses on the popular propensity score matching method and gives extensive guidance for its implementation. In the second part of the book this method is used to evaluate the employment effects of job creation schemes on the participating individuals in Germany. Based on a large administrative dataset of over 11 000 participants the study allows to draw policy relevant conclusions for the first time. **Evaluating Active Labour**

Market Policies Patrick A. Puhani, 2012-12-06 Most governments in today's market economies spend significant sums of money on labour market programmes. The declared aims of these programmes are to increase the re-employment chances of the unemployed. This book investigates which active labour market programmes in Poland are value for money and which are not. To this end modern statistical methods are applied to both macro and microeconomic data. It is shown that training programmes increase whereas job subsidies and public works decrease the re-employment opportunities of the unemployed. In general all active labour market policy effects are larger in absolute size for men than for women. By surveying previous studies in the field and outlining the major statistical approaches that are employed in the evaluation literature the book can be of help to any student interested in programme evaluation irrespective of the particular programme or country concerned.

Econometric Evaluation of Socio-Economic Programs Giovanni Cerulli, 2022-11-02 This book provides advanced theoretical and applied tools for the implementation of modern microeconomic techniques in evidence based program evaluation for the social sciences. The author presents a comprehensive toolbox for designing rigorous and effective ex post program evaluation using the statistical software package Stata. For each method a statistical presentation is developed followed by a practical estimation of the treatment effects. By using both real and simulated data readers will become familiar with evaluation techniques such as regression adjustment, matching, difference in differences, instrumental variables.

regression discontinuity design and synthetic control method and are given practical guidelines for selecting and applying suitable methods for specific policy contexts The second revised and extended edition features two new chapters on some recent development of difference in differences Specifically chapter 5 introduces advanced difference in differences methods when many times are available and treatment can be either time varying or fixed at a specific time Chapter 6 introduces the synthetic control method a treatment effect estimation approach suitable when only one unit is treated Both chapters present applications using the software Stata

Active Labor Market Policies in Europe Jochen Kluve, David Card, Michael Fertig, Marek Góra, Lena Jacobi, Peter Jensen, Reelika Leetmaa, Leonhard Nima, Eleonora Patacchini, Sandra Schaffner, Christoph M. Schmidt, Bas van der Klaauw, Andrea Weber, 2007-02-23 Measures of Active Labor Market Policy such as training wage subsidies public employment measures and job search assistance are widely used in European countries to combat unemployment Little however is known about what each country can learn from experiences in other countries This study provides novel insight on this important policy issue by discussing the role of the European Commission's Employment Strategy reviewing the experiences made in European states and giving the first ever quantitative assessment of the existing cross country evidence answering the question what labor market program works for what target group under what economic and institutional circumstances Using an innovative meta analytical approach the authors find that rather than contextual factors such as labor market institutions or the business cycle it is almost exclusively the program type that matters for program effectiveness While direct employment programs in the public sector appear detrimental wage subsidies and Services and Sanctions can be effective in increasing participants employment probability

Evaluating the Employment Effects of Job Creation Schemes in Germany Stephan Lothar Thomsen, 2007-05-16 This book analyses the employment effects of job creation schemes for participating individuals in Germany Programs provide subsidized jobs that are additional in nature and of value for society International evidence on their effectiveness suggests that programs should be targeted to the needs of the unemployed and should be offered early in the period of unemployment Both questions are studied for job creation schemes in Germany

Handbook of Econometrics, 2020-11-25 Handbook of Econometrics Volume 7A examines recent advances in foundational issues and hot topics within econometrics such as inference for moment inequalities and estimation of high dimensional models With its world class editors and contributors it succeeds in unifying leading studies of economic models mathematical statistics and economic data Our flourishing ability to address empirical problems in economics by using economic theory and statistical methods has driven the field of econometrics to unimaginable places By designing methods of

inference from data based on models of human choice behavior and social interactions econometricians have created new subfields now sufficiently mature to require sophisticated literature summaries Presents a broader and more comprehensive view of this expanding field than any other handbook Emphasizes the connection between econometrics and economics

Fürnkranz-Prskawetz,2009-05-05 The central aim of many studies in population research and demography is to explain cause effect relationships among variables or events For decades population scientists have concentrated their efforts on estimating the causes of effects by applying standard cross sectional and dynamic regression techniques with regression coefficients routinely being understood as estimates of causal effects The standard approach to infer the effects of causes in natural sciences and in psychology is to conduct randomized experiments In population studies experimental designs are generally infeasible In population studies most research is based on non experimental designs observational or survey designs and rarely on quasi experiments or natural experiments Using non experimental designs to infer causal relationships i e relationships that can ultimately inform policies or interventions is a complex undertaking Specifically treatment effects can be inferred from non experimental data with a counterfactual approach In this counterfactual perspective causal effects are defined as the difference between the potential outcome irrespective of whether or not an individual had received a certain treatment or experienced a certain cause The counterfactual approach to estimate effects of causes from quasi experimental data or from observational studies was first proposed by Rubin in 1974 and further developed by James Heckman and others This book presents both theoretical contributions and empirical applications of the counterfactual approach to causal inference *Handbook of the Economics of Education* Eric A.
