Economic Growth And Macroeconomic Dynamics:

Economic Growth and Macroeconomic Dynamics Steve Dowrick, Rohan Pitchford, Stephen J. Turnovsky, 2004-05-31 The development of the endogenous growth model rekindled interest in growth theory In contrast to the neo classical model long run endogenous growth emerged as an equilibrium outcome reflecting the behaviour of optimizing agents in the economy This book brings together a number of contributions in growth theory and macroeconomic dynamics reflecting these developments and the ongoing debate over the relative merits of neo classical and endogenous growth models It focuses on the emergence of three important aspects First it develops growth models that extend the underlying theory in different directions Second it addresses one of the concerns of the literature on growth and dynamics the statistical properties of underlying data and the effort to ensure that growth models are consistent with empirical evidence Third it discusses the increasingly international focus of macrodynamics and growth theory an inevitable consequence of the integration of the world economy

Rapid Growth and Relative Decline M. Setterfield, 1996-12-17 Do high rates of economic growth create conditions favourable to their own maintenance Or can a period of high growth sow the seeds of its own destruction This book addresses these questions by conceiving growth and structural change as path dependent processes Methodological theoretical and empirical insights are combined in an extended model of cumulative causation which shows how endogenously induced technological and institutional changes may cause the dynamics of a period of high growth to break down This casts new light on the debate over Britain's economic decline

The Impact of Science on Economic Growth and its Cycles Arvid Aulin, 1998-09-17 The author shows that the enormous gap between theory and facts in modern macroeconomics can only be eliminated by nonlinear macroeconomic dynamics with the following special characteristics First of all only certain group theoretical invariants generate the correct growth cycles with irregularly varying lengths not any stochastic process as usually applied for this purpose Furthermore a special extended value function and generalized human capital are needed for a correct representation of scientific and technological innovation Finally the correct nonlinear macroeconomic dynamics are not reducible to microeconomics for both of the above mentioned reasons

Methods of Macroeconomic Dynamics Stephen J. Turnovsky, 2000 Just as macroeconomic models describe the overall economy within a changing or dynamic framework the models themselves change over time In this text Stephen J Turnovsky reviews in depth several early models as well as a representation of more recent models They include traditional backward looking models linear rational expectations future looking models intertemporal optimization models endogenous growth models and continuous time stochastic models The author uses examples from both closed and open economies Whereas others commonly introduce models in a closed context tacking on a brief discussion of the model in an open economy Turnovsky integrates the two perspectives throughout to reflect the increasingly international outlook of the field This new edition has been extensively revised It contains a new chapter on optimal monetary and fiscal policy and the coverage of growth theory

has been expanded substantially The range of growth models considered has been extended with particular attention devoted to transitional dynamics and nonscale growth The book includes cutting edge research and unpublished data including much of the author s own work

Rapid Growth and Relative Decline Mark Setterfield,1997-01-01 Do high rates of economic growth create conditions favourable to its own maintenance Or can a period of high growth sow the seeds of its own destruction In this book Mark Setterfield attempts to answer questions of this nature

Complex Economic Dynamics: An introduction to macroeconomic dynamics Richard Hollis Day,1994 The two volumes of Complex Economic Dynamics show that far from being a passing trend in economic research complex dynamics belongs at the heart of the subject Although they can be read independently the volumes follow a logical sequence Volume 1 contained nontechnical introductions to the basics of economic change and to the mathematical and theoretical tools used to describe them Volume 2 which is concerned with macroeconomic dynamics looks at the economy as a whole Topics include business cycles economic growth economic development and dynamical economic science and policy The book concludes with the author s reflections on the implications of complex dynamics for economic theory quantitative research and government policy Pub desc

International Macroeconomic Dynamics Stephen J. Turnovsky,1997 International Macroeconomic Dynamics provides extensive applications of important macroeconomic dynamic models to the international economy For a long time the study of macroeconomics has focused almost exclusively on a closed economy and downplayed the role of international transactions Today however researchers recognize that one cannot fully understand domestic macroeconomic relationships without considering the global economy within which each country operates Increasingly economists are treating international transactions as an integral part of the macroeconomic system and international macroeconomics has become an area of intensive research activity International Macroeconomic Dynamics provides extensive applications of important macroeconomic dynamic models to the international economy It adopts the main contemporary macroeconomic framework the representative agent model and develops a series of models of increasing complexity The author considers both small and large economies and analyzes them in both deterministic and stochastic contexts The emphasis is very much on the development of the analytical models a novel feature is the extensive use of continuous time stochastic methods While the author applies the models to a range of important policy issues particularly issues of fiscal policy the reader is invited to view the analyses as blueprints for other applications

Political Institutions and Output Collapses Patrick A. Imam, Jonathan R. W. Temple, 2023-02-17 Major output collapses are costly and frequent in the developing world Using cross country data we classify five year periods using a two dimensional state space based on growth regimes and political institutions We then model the joint evolution of output growth and political institutions as a finite state Markov chain and study how countries move between states We find that growth is more likely to be sustained under democracy than under autocracy output collapses are more persistent under autocracy and stagnation under autocracy can give way to outright collapse Democratic countries appear to be more resilient

Natural Resources, Neither Curse nor Destiny Daniel Lederman, William F Maloney, 2006-10-23 Natural Resources Neither Course nor Destiny brings together a variety of analytical perspectives ranging from econometric analyses of economic growth to historical studies of successful development experiences in countries with abundant natural resources The evidence suggests that natural resources are neither a curse nor destiny Natural resources can actually spur economic development when combined with the accumulation of knowledge for economic innovation Furthermore natural resource abundance need not be the only determinant of the structure of trade in developing countries In fact the accumulation of knowledge infrastructure and the quality of governance all seem to determine not only what countries produce and export but also how firms and workers produce any good

Elgar

Companion to Neo-Schumpeterian Economics Horst Hanusch, Andreas Pyka, 2007 The Elgar Companion to Neo Schumpeterian Economics is a cutting edge collection of specially commissioned contributions highlighting not only the broad scope but also the common ground between all branches of this prolific and fast developing field of economics For 25 years economists have been investigating industrial dynamics under the heading of neo Schumpeterian economics which has itself become a mature and widely acknowledged discipline in the fields of innovation knowledge growth and development economics The Elgar Companion to Neo Schumpeterian Economics surveys the achievements of the most visible scholars in this area The contributions to the Companion give both a brief survey on the various fields of neo Schumpeterian economics as well as insights into recent research at the scientific frontiers The book also illustrates the potential of neo Schumpeterian economics to overcome its so far self imposed restriction to the domains of technology driven industry dynamics and to become a comprehensive approach in economics suited for the analysis of development processes in all economic domains Integrating both the public sector and financial markets the book focusses on the co evolutionary processes between the different domains As a roadmap for the development of a comprehensive neo Schumpeterian theory the Companion will be an invaluable source of reference for researchers in the fields of industrial dynamics and economic growth and academics and scholars of economics generally PhD students will find the Companion an indispensable general introduction to the field of neo Schumpeterian economics It will also appeal to politicians and consultants engaged in national and international policy as the Companion deals with the highly important and ever topical phenomena of economic development Foundations of Modern Macroeconomics Ben J. Heijdra, 2009-07-02 This volume deals with all the major topics summarizes the important approaches and gives students a coherent angle on all aspects of macroeconomic thought *Understanding and Avoiding the Oil Curse in Resource-rich Arab Economies* Ibrahim Elbadawi, Hoda Selim, 2016-07-14 For over eighty years the Arab region has derived massive wealth from its natural resources yet the region's economies remain little diversified while the oil market is experiencing major structural shifts with the advent of shale gas Moreover the resource itself is eventually exhaustible Under these conditions economic prosperity cannot be sustainable The critical question is how can the countries of this region escape the oil curse In this volume leading economists argue that the curse is not a predestined outcome but a result of weak institutions and bad governance A variety of analytical perspectives and examination of various international case studies leads to the conclusion that natural resources can only spur economic development when combined with sound political institutions and effective economic governance This volume with its unique focus on the Arab region will be an important reference for researchers and policymakers alike *IMF Staff Papers, Volume 50, No. 2* Mr. Robert P. Flood, 2003-07-11 This paper examines sources of economic growth in East Asia The conventional growth accounting approach to estimating the sources of economic growth requires unrealistically strong assumptions about either competitiveness of factor markets or the form of the underlying aggregate production function The paper outlines a new

approach utilizing nonparametric derivative estimation techniques that does not require imposing these restrictive assumptions The results for East Asian countries show that output elasticities of capital and labor tend to be different from the income shares of these factors The paper also explores the compensating potential of private intergenerational transfers

Inequality and Finance in Macrodynamics Bettina Bökemeier, Alfred Greiner, 2017-04-26 This contributed volume combines approaches of the current inequality debate with aspects of finance based on profound macroeconomic model analyses Research on inequality has had a long tradition in economics With the financial crisis from 2007 not only output decreased tremendously but also inequality has risen since then The book presents selected contributions of a workshop held at Bielefeld University in 2016 and features additional papers written by experts in the field A mixture of established researchers and young scholars presents both theoretical and empirical frameworks to analyze the subject

Overlapping Generations Stephen E. Spear, Warren Young, 2023-09-04 The 800 pound gorilla in the room of macroeconomics is the question of why the overlapping generations model didn't become the central workhorse model for macroeconomics as opposed to the neoclassical growth model The authors here explore the co evolution of the two models
