The Economics of Services J. O. Jansson,2013-01-01 Acclaim for the first edition This is a well written provocative book featuring much new material original data analyses and interesting insights Despite the proliferation of books on various aspects of services there is nothing quite like it around In particular examination of the challenges that the growth of services presents to conventional economics is very valuable Ian Miles University of Manchester UK This is an intriguing book that contains many interesting ways of conceptualising service from the perspective of economics It makes a number of important contributions to the academic literature It is one of the very few books and it might even be the only book to be written by an economist on the economics of services it is thus a pioneer work and is of value in that it attempts to bring together the work that economists have done on services John Bryson University of Birmingham UK Despite the fact that services have overtaken industry in terms of employment and GDP in developed countries rigorous economic study of the service sector remains seriously neglected The first edition of The Economics of Services initiated a redress of this oversight Fully revised and updated the second edition of this highly acclaimed textbook should be required complimentary reading to mainstream microeconomics textbooks for graduate students of economics and for advanced courses in labour urban and regional economics economic geography and economic history The text emphasizes the distinction between intermediate producer services and final consumer services Many of the former are traded in global markets much like material goods in general whilst the markets for consumer services are markedly local This requires quite different micro foundations in each case Other key issues explored include the productivity development and quality of service measurements and the key role of urbanization for service sector growth The critical issues for the future of the real economy beyond the financial crisis are also analysed in depth and the author illustrates how a better understanding of the nature of the service economy is necessary for policy innovation with a view to regenerating the welfare state

Nusbaumer, 2012-12-06 Service activities are at the heart of a major economic revolution taking place all around us This new economic revolution is equivalent to the Industrial Revolution in the eighteenth century the rise of the guilds in the Middle Ages and the shift from a hunter gatherer economy to an agricultural pastoral economy at the dawn of recorded history when organized agriculture first led to the development of towns and the invention of writing In this new revolution computers factory robots and completely automated factories are rapidly reducing the need for physical labor in production At the same time sophisticated agricultural machinery fertilizers pesticides and biogenetic engineering have reduced and will continue to reduce the physical labor involved in growing food In the new economy that will emerge from this revolution most people will earn their living by working in services Like all revolutions the new economic revolution is troublesome because it brings with it major changes in everyday life both at home and in the workplace Change creates uncertainty about the future and
