On the Economy of Machinery and Manufactures Charles Babbage, 2020-03-27 There exists perhaps no single circumstance which distinguishes our country more remarkably from all others than the vast extent and perfection to which we have carried the contrivance of tools and machines for forming those conveniences of which so large a quantity is consumed by almost every class of the community The amount of patient thought of repeated experiment of happy exertion of genius by which our manufactures have been created and carried to their present excellence is scarcely to be imagined If we look around the rooms we inhabit or through those storehouses of every convenience of every luxury that man can desire which deck the crowded streets of our larger cities we shall find in the history of each article of every fabric a series of failures which have gradually led the way to excellence and we shall notice in the art of making even the most insignificant of them

machine for the calculation and printing of mathematical tables the difference machine that he had the idea of incorporating cards of the Jacquard trade The sequential reading would give instructions and data to his machine and thus imagined the mechanical ancestor of computers today He never finished his analytical machine but spent the rest of his life conceiving it in the smallest details and constructing a prototype One of his sons built the central unit the mill and the printer in 1888 and made a successful demonstration of table calculation at the Royal Astronomical Academy in 19081 It was between 1847 and 1849 that Charles Babbage undertook to use the technological advances of his analytical machine to design the plans of a second no 2 machine with equal specifications requiring three times fewer parts than the previous one In 1991 from these plans it was possible to reconstruct a part of this machine which works perfectly using the techniques that were available in the nineteenth century which shows that it could have been built during the lifetime of Charles Babbage Preface The present volume may be considered as one of the consequences that have resulted from the calculating engine the construction of which I have been so long superintending Having been induced during the last ten years to visit a considerable number of workshops and factories both in England and on the Continent for the purpose of endeavouring to make myself acquainted with the various resources of mechanical art I was insensibly led to apply to them those principles of generalization to which my other pursuits had naturally given rise The increased number of curious processes and interesting facts which thus came under my attention as well as of the reflections which they suggested induced me to believe that the publication of some of them might be of use to persons who propose to bestow their attention on those enquiries which I have only incidentally considered With this view it was my intention to have delivered the present work in the form of a course of lectures at Cambridge an intention which I was subsequently induced to alter The substance of a considerable portion of it has however appeared among the preliminary chapters of the mechanical part of the Encyclopedia Metropolitana I have not attempted to offer a complete enumeration of all the mechanical principles which regulate the application of machinery to arts and manufactures
