niques are being used to address real world problems in such areas as programming languages operating systems databases distributed computing expert systems and web computing Separation of concerns has been a guiding principle of software engineering for nearly 30 years but its known benefits are seldom fully achieved in practice This is primarily because traditional mechanisms are not powerful enough to handle many kinds of concerns that occur in practice Over the last 10 years to overcome the limitations of traditional frameworks many researchers including several from the reflection community have proposed new approaches For the first time papers on advanced approaches to separation of concerns were explicitly solicited Following the success of previous conferences such as IMSA 92 in Tokyo Reflection 96 in San Francisco and Reflection 99 in Saint Malo we hope that the conference provided an excellent forum for researchers with a broad range of interests in metalevel architectures reflective techniques and separation of concerns in general
