Future Of The Southern Plains:

The Future of the Southern Plains Sherry L. Smith, 2005-08-01 In *The Future of the Southern Plains* scholars bring the region to the forefront by asking important questions about its past and suggesting prospects for its future. The contributors, some of them natives of the region, bring to their work a blend of scholarship and personal experience. They match intellectual sophistication with deep affection for a place defined primarily as western Texas, Oklahoma, and eastern New Mexico. Within this volume is a story about America, a story about limits, and a story about challenging those limits. Seven historians, one geographer, and a paleoclimatologist contribute a wealth of observation, analysis, and commentary on the environmental characteristics and history of the Southern Plains. They address such themes as failing communities, scarce water, endangered species, and disappearing ways of life, and the possible results of these developments, not only in the Southern Plains but elsewhere on the globe. Based on presentations at a symposium sponsored by the Clements Center for Southwest Studies at Southern Methodist University, these essays treat the most important aspects of life on the Southern Plains today, from climate, politics, and religion to business and environmental renewal. Contributors and topics include: Sherry L. Smith, Introduction; Dan Flores, Environmental destruction and preservation; John Miller Morris, Corporations and family farms; Diana Davids Olien, Oil production; John Opie, Water management; Jeff Roche, Political history; Yolanda Romero, Political history; Elliott West, Exploration; Connie Woodhouse, Droughts.

The Future of Arid Grasslands Barbara Tellman, 1999-04. Proceedings of a conf on the major problems facing grasslands in arid/semi-arid regions of the U.S./Mexico to seek solutions to those problems. Grasslands in many parts of the Southwest/northern Mexico are facing serious threats from urbanization, subdivision, development, to spread of invasive plant species, to conflicts over grazing policy. Target groups for participation included private landowners, non-profit groups, government agencies, environmental advocates, economists, scientists, etc. Emphasized practical hands-on mgmt methods including time in grasslands managed under a variety of techniques.

The Future of Drylands Cathy Lee, Thomas Schaaf, 2008-10-29 Drylands have been cradles to some of the world's greatest civilizations, and contemporary dryland communities feature rich and unique cultures. Dryland ecosystems support a surprising amount of biodiversity. Desertification, however, is a significant land degradation problem in the arid/semi-arid and dry/sub-humid regions of the world. Deterioration of soil and plant cover has adversely affected 70% of the world's drylands as a result of extended droughts as well as mismanagement of range and cultivated lands. The situation is likely to worsen with high population growth rates and accompanying land use conflicts. The contributions to *The Future of Drylands*, an international scientific conference held under the leadership of UNESCO, address these issues and offer practical solutions for combating desertification along with conserving and sustainably managing dryland ecosystems. Major themes include the

conservation of dryland biological and cultural diversity and the human dryland interface This volume documents how our improved understanding of drylands provides insight into the health and future prospects of these precious ecosystems that should help ensure that dryland communities enjoy a sustainable future **Future of the Highway Program** United States.
