Fuzzy Topology:

Fuzzy Topology Ying-ming Liu, Mao-kang Luo, 1997 Fuzzy set theory provides us with a framework which is wider than that of classical set theory Various mathematical structures whose features emphasize the effects of ordered structure can be developed on the theory Fuzzy topology is one such branch combining ordered structure with topological structure This branch of mathematics emerged from the background processing fuzziness and locale theory proposed from the angle of pure mathematics by the great French mathematician Ehresmann comprise the two most active aspects of topology on lattice which affect each other This book is the first monograph to systematically reflect the up to date state of fuzzy topology It emphasizes the so called pointed approach and the effects of stratification structure appearing in fuzzy sets The monograph can serve as a reference book for mathematicians researchers and graduate students working in this branch of mathematics After an appropriate rearrangements of the chapters and sections it can also be used as a text for undergraduates *Fuzzy*

Topology N. Palaniappan, 2005 This book imparts latest developments in various properties of fuzzy topology viz fuzzy set theory fuzzy point and its neighbourhood structure Fuzzy nets and Fuzzy convergence Fuzzy metric Different fuzzy compactness Fuzzy connectedness Fuzzy separation axioms and properties Product spaces Convex fuzzy sets and Fuzzy uniform spaces BOOK JACKET

Aull, R. Lowen, 2013-04-18 This book is

the first one of a work in several volumes treating the history of the development of topology The work contains papers which can be classified into 4 main areas Thus there are contributions dealing with the life and work of individual topologists with specific schools of topology with research in topology in various countries and with the development of topology in different periods The work is not restricted to topology in the strictest sense but also deals with applications and generalisations in a broad sense Thus it also treats e g categorical topology interactions with functional analysis convergence spaces and uniform spaces Written by specialists in the field it contains a wealth of information which is not available anywhere else

Mathematics of Fuzziness—Basic Issues Xuzhu Wang, Da Ruan, Etienne E. Kerre, 2009-04-03 Mathematics of

Fuzziness Basic Issues introduces a basic notion of fuzziness and provides a conceptual mathematical framework to characterize such fuzzy phenomena in Studies in Fuzziness and Soft Computing The book systematically presents a self contained introduction to the essentials of mathematics of fuzziness ranging from fuzzy sets fuzzy relations fuzzy numbers fuzzy algebra fuzzy measures fuzzy integrals and fuzzy topology to fuzzy control in a strictly mathematical manner It contains most of the authors research results in the field of fuzzy set theory and has evolved from the authors lecture notes to both undergraduate and graduate students over the last three decades A lot of exercises in each chapter of the book are particularly suitable as a textbook for any undergraduate and graduate student in mathematics computer science and engineering The reading of the book will surely lay a solid foundation for further research on fuzzy set theory and its applications

On the Existence of Natural Non-topological, Fuzzy Topological Spaces Robert Lowen,1985

Putting Crime in its Place David Weisburd,Wim Bernasco,Gerben Bruinsma,2008-10-20 Putting Crime in its Place Units of Analysis in Geographic Criminology focuses on the units of analysis used in geographic criminology While crime and place studies have been a part of criminology from the early 19th century growing interest in crime places over the last two decades demands critical reflection on the units of analysis that should form the focus of geographic analysis of crime Should the focus be on very small units such as street addresses or street segments or on larger aggregates such as census tracts or communities Academic researchers as well as practical crime analysts are confronted routinely with the dilemma of deciding what the unit of analysis should be when reporting on trends in crime when identifying crime hot spots or when mapping crime in cities In place based crime prevention the choice of the level of aggregation plays a particularly critical role This peer reviewed collection of essays aims to contribute to crime and place studies by making explicit the problems involved in choosing units of analysis in geographic criminology Written by renowned experts in the field the chapters in this book address basic academic questions and also provide real life examples and applications of how they are resolved in cutting edge research Crime analysts in police and law enforcement agencies as well as academic researchers studying the spatial distributions of crime and victimization will learn from the discussions and tools presented

Towards an Advanced Modelling of Complex Economic Phenomena Jaime Gil Aluja, Anna M.

Gil-Lafuente, 2011-11-06 Little by little we are being provided with an arsenal of operative instruments of a non numerical nature in the shape of models and algorithms capable of providing answers to the aggressions which our economics and management systems must withstand coming from an environment full of turmoil In the work which we are presenting we dare to propose a set of elements from which we hope arise focuses capable of renewing those structures of economic thought which are upheld by the geometrical idea The concepts of pretopology and topology habitually marginalized in economics and management studies have centred our interest in recent times We consider that it is not possible to conceive formal structures capable of representing the Darwinism concept of economic behaviour today without recurring to this fundamental generalisation of metric spaces In our attempts to find a solid base to the structures proposed for the treatment of economic phenomena we have frequently resorted to the theory of clans and the theory of affinities with results which we believe to be satisfactory We would like to go further establishing if possible the connection between their axiomatics at the same time as developing some uncertain pretopologies and topologies capable of linking previously unconnected theories at the same time easing the creation of other new theories
