Sineglazov, Elena Chumachenko, 2020-09-03 This book is intended for specialists as well as students and graduate students in the field of artificial intelligence robotics and information technology It is will also appeal to a wide range of readers interested in expanding the functionality of artificial intelligence systems One of the pressing problems of modern artificial intelligence systems is the development of integrated hybrid systems based on deep learning Unfortunately there is currently no universal methodology for developing topologies of hybrid neural networks HNN using deep learning The development of such systems calls for the expansion of the use of neural networks NS for solving recognition classification and optimization problems As such it is necessary to create a unified methodology for constructing HNN with a selection of models of artificial neurons that make up HNN gradually increasing the complexity of their structure using hybrid learning algorithms

### **Computational Intelligence Techniques for Bioprocess Modelling, Supervision and Control**

Maria Carmo

Nicoletti, 2009-06-29 Computational Intelligence CI and Bioprocess are well established research areas which have much to offer each other Under the perspective of the CI area Bioprocess can be considered a vast application area with a growing number of complex and challenging tasks to be dealt with whose solutions can contribute to boosting the development of new intelligent techniques as well as to help the refinement and specialization of many of the already existing techniques Under the perspective of the Bioprocess area CI can be considered a useful repertoire of theories methods and techniques that can contribute and offer interesting alternative approaches for solving many of its problems particularly those hard to solve using conventional techniques Although throughout the past years CI and Bioprocess areas have accumulated substantial specific knowledge and progress has been quick and with a high degree of success we believe there is still a long way to go in order to use the potentialities of the available CI techniques and knowledge at their full extent as tools for supporting problem solving in bioprocesses One of the reasons is the fact that both areas have progressed steadily and have been continuously accumulating and refining specific knowledge another reason is the high level of technical expertise demanded by each of them The acquisition of technical skills experience and good insights in either of the two areas is very demanding and a hard task to be accomplished by any professional
