Post-Truth, Scepticism & Power Stuart Sim,2019-04-02 This book examines the concept of post truth and the impact it is having on contemporary life bringing out both its philosophical and political dimensions Post truth is contextualised within the philosophical discourse of truth with particular reference to theories of scepticism and relativism to explore whether it can take advantage of these to claim any intellectual credibility Sim argues that post truth cannot be defended on either sceptical or relativistic grounds even those provided by recent iconoclastic philosophical movements such as poststructuralism and postmodernism The affinity between post truth and conspiracy theory is emphasised and the extent to which post truth plays a role in religious doctrine is also considered Post truth is seen to constitute a threat to liberal democratic ideals and our Enlightenment heritage raising the question of whether we are moving into a post liberal age where the far right would hold power To prevent this post truth urgently needs to be countered *Sustainable Energy and Technological Advancements* Gayadhar Panda,R. T. Naayagi,Sukumar Mishra,2022-03-24 This book contains selected papers presented at the First International Symposium on Sustainable Energy and Technological Advancements ISSETA 2021 which was organized by the Department of Electrical Engineering NIT Meghalaya Shillong India during September 24 25 2021 The topics covered in the book mainly focuses on the cutting edge research domain with respect to sustainable energy technologies smart building integration and application of multiple energy sources advanced power converter topologies and their modulation techniques and information and communication technologies for smart microgrids **Popper's Open Society After Fifty Years** Ian Jarvie,Sandra Pralong,2005-08-12 Popper s Open Society After Fifty Years presents a coherent survey of the reception and influence of Karl Popper s masterpiece The Open Society and its Enemies over the fifty years since its publication in 1945 as well as applying some of its principles to the context of modern Eastern Europe This unique volume contains papers by many of Popper s contemporaries and friends including such luminaries as Ernst Gombrich in his paper The Open Society and its Enemies Remembering its Publication Fifty Years Ago Foundations for New Economic Thinking S. Dow,2012-04-11 New economic thinking is in demand in the light of the recent economic crisis This book equips the reader with a better understanding of current ways of thinking as well as an awareness of other possibilities providing the foundations for debate in theory and methodology alongside practical implications for policy **Naturalism in the Philosophy of Health** Élodie Giroux,2016-04-25 In a series of papers published in the 1970s Christopher Boorse proposed a naturalist theory of health mainly based on a value free concept of biological function a concept of reference class and the notion of statistical normality His theory has profoundly shaped the philosophical debates on the concepts of health and

disease It could even be said that the numerous criticisms of his biostatistical theory are at the centre of what is usually referred to as the debate between normativists and naturalists Today the predominant naturalist theory of health is still Boorse s biostatistical theory This volume offers the first comprehensive review and critical assessment of the nature and status of naturalism in the philosophy of health It explores the notion of biological normativity and its relevance for the philosophy of health and it analyses the implications of the philosophical theories of health for healthcare and the debate on health enhancement In the first section several contributions identify the kind of naturalism the biostatistical theory belongs to and offer further criticisms or possible modifications such as the concept of function that is required by this theory and whether a comparativist approach to health is more relevant than a non comparativist one The second section explores natural or biological normativity and some possible accounts of health that could be based on this concept The third and final section focuses on the implications of naturalism in healthcare Goals of Medicine is the first paper in which Christopher Boorse ventured toward analysing the implication of his biostatistical theory of health on the practice of medicine the difficult issue of the goals of medicine and the boundary between treating and enhancing Other papers in this section critically evaluate Boorse s account and analyse the importance of a positive concept of health   **National Human Rights Action Planning** Azadeh Chalabi,2018-07-18 This book deals with human rights action planning as a largely under researched area from theoretical doctrinal empirical and practical perspectives and as such provides the most comprehensive studies of human rights planning to date At the theoretical level by advancing a novel general theory of human rights planning it offers an alternative to the traditional state centric model of planning This new theory contains four sub theories contextual substantive procedural and analytical ones At the doctrinal level by conducting a textual analysis of core human rights conventions it reveals the scope and nature of the states obligation to adopt a plan of action for implementing human rights At the empirical level a cross case analysis of national human rights action plans of 53 countries is conducted exploring the major problems of these plans in different phases of planning and uncovering the underlying causes of these problems At the practical level this volume sets out how these plans should be developed and implemented how they can be best monitored by international human rights bodies and how to maximize their effectiveness With discussions bridging human rights theory and practice and development discourse this book will be a useful resource for a wide range of audiences from academics of different disciplines law human rights social policy political science political philosophy legal philosophy development studies planning studies socio legal studies to governments human rights practitioners and the UN human rights bodies
