*G Proteins, Receptors, and Disease* Allen M. Spiegel, 2012-12-06 More than a collection of review articles *G Proteins Receptors and Disease* summarizes in depth the state of our knowledge today concerning not only how cells communicate via G protein coupled signal transduction processes but also how defects in these proteins and their receptors can cause serious human disease involving many different organ systems Written by leading investigators each chapter describes in detail the structure and function of a particular G protein or receptor outlines possible mutations and discusses fully the molecular pathogenesis of associated diseases Diagnostic and therapeutic implications are also discussed when relevant In its unique blend of cutting edge basic science and clinical medicine *G Proteins Receptors and Disease* offers deep insights into the physiological significance of this key signal transduction pathway as well as into the molecular basis of diseases ranging from obesity to malignancy The basic understanding of the complex signal transduction process achieved here provides a firm foundation for future efforts to prevent and cure these diseases

*G Protein-Coupled Receptors in Health and Disease, Part B*, 2009-09-19 G protein coupled receptors GPCRs transduce signals from a diverse array of endogenous ligands including ions amino acids nucleotides lipids peptides and large glycoprotein hormones They are also responsible for our sensing of exogenous stimuli including photons and odorants GPCRs regulate almost every aspect of our physiological functions It is estimated that 40% to 50% of currently used therapeutic drugs target GPCRs directly or indirectly Because the current drugs target only a small portion of the GPCRs opportunities for targeting the remaining GPCRs is enormous This volume reviews the latest developments in this rapidly advancing field This series provides a forum for discussion of new discoveries approaches and ideas Contributions from leading scholars and industry experts Reference guide for researchers involved in molecular biology and related fields
