Gaia In Action Science Of The Living Earth:

Gaia in Action Peter Bunyard,1996 James Lovelock s Gaia theory which views the earth as a living organism is widely seen as a vital change in our scientific and cultural outlook on the planet we inhabit As the developed and developing worlds grapple with problems of sustainability on a planetary scale the implications of Gaia theory are both urgent and critically important The contributors include James Lovelock Lynn Margulis Brian Goodwin Mae Wan Ho Peter Saunders Kate Rawles and others They seek to define what is meant by Gaia and to translate the theory into practical ways of relating to the planet as a whole *Gaia's Body* Tyler Volk,2012-12-06 If the biosphere really is a single coherent system then it must have something like a physiology It must have systems and processes that perform living functions In *Gaia s Body* Tyler Volk describes the environment that enables the biosphere to exist various ways of looking at its anatomy and physiology the major biogeographical regions such as rainforests deserts and tundra the major substances the biosphere is made of and the chemical cycles that keep it in balance He then looks at the question of whether there are any long term trends in the earth s evolution and examines the role of humanity in Gaia s past and future Both adherents and sceptics have often been concerned that Gaia theory contains too much goddess and too few verifiable hypotheses This is the book that describes for scientists students and lay readers alike the theory s firm basis in science The Biosphere and Noosphere Reader David Pitt,Paul R. Samson,2012-10-02 The Reader is the first comprehensive history of the noosphere and biosphere Drawing on classical influences modern parallels and insights into the future the Reader traces the emergence of noosphere and biosphere concepts within the concept of environmental change Reproducing material from seminal works both past and present key ideas and writings of prominent thinkers are presented including Bergson Vernadsky Lovelock Russell Needham Huxley Medawar Toynbee and Boulding and extensive introductory pieces by the editors draw attention to common themes and competing ideas Focussing on issues of origins theories parallels and potential the discussions place issues in a broad context compare and contrast central concepts with those of the Gaia hypothesis sustainability and global change and examine the potential application of noospheric ideas to current debates about culture education and technology in such realms as the Internet space exploration and the emergence of super consciousness Literally the sphere of mind or intellect the noosphere is apart of the realm of the possible in human affairs where there is a conscious effort to tackle global issues The noosphere concept captures a number of key contemporary issues social evolution global ecology Gaia deep ecology and global environmental change contributing to ongoing debates concerning the implications of emerging technologies
