Galileo In 90 Minutes:

The Essential Galileo John Gribbin, Mary Gribbin, 2014-04-01 Galileo Galilei 1564 1642 was the first scientist in the modern use of the term. Instead of relying on the works of Aristotle he actually carried out experiments to test theories. Legend has it that one of his experiments involved throwing weights off the Leaning Tower of Pisa. His astronomical observations with the telescope shattered the idea that the Earth was at the centre of the Universe and led to his trial for heresy. He had a great lust for life, three children by a woman he never married, a biting sarcasm with and the friendship of princes and in spite of his run in with Pope Urban VIII, cardinals. An introduction, afterword and clear chronological table place Galileo's work in the context of the development of scientific knowledge. *Galileo's Daughter* Dava Sobel, 2009-05-26 Inspired by a long fascination with Galileo and by the remarkable surviving letters of Galileo's daughter, a cloistered nun, Dava Sobel has written a biography unlike any other of the man Albert Einstein called the father of modern physics. Indeed, of modern science altogether. Galileo's Daughter also presents a stunning portrait of a person hitherto lost to history, described by her father as a woman of exquisite mind, singular goodness and most tenderly attached to me. Galileo's Daughter dramatically recolors the personality and accomplishment of a mythic figure whose seventeenth-century clash with Catholic doctrine continues to define the schism between science and religion. Moving between Galileo's grand public life and Maria Celeste's sequestered world, Sobel illuminates the Florence of the Medicis and the papal court in Rome during the pivotal era when humanity's perception of its place in the cosmos was about to be overturned. In that same time while the bubonic plague wreaked its terrible devastation and the Thirty Years War tipped fortunes across Europe, one man sought to reconcile the Heaven he revered as a good Catholic with the heavens he revealed through his telescope. With all the human drama and scientific adventure that distinguished Dava Sobel's previous book *Longitude*, Galileo's Daughter is an unforgettable story.

The Essential Einstein John Gribbin, Mary Gribbin, 2014-04-01 The definitive scientific icon of the twentieth century, Albert Einstein is remembered for one equation, $E=mc^2$, and the image of a white-haired pipe-smoking professor who didn't wear socks. But the equation comes from a time when all of his great work was done. The real Albert Einstein, the high school drop-out who won the Nobel Prize along with the hearts of so many young women, was young, handsome, dark-haired and a natty dresser. And his greatest piece of work was so poorly understood at the time that the Nobel Committee, who couldn't understand it, but in a panic felt they ought to give him a prize for something, honoured him for something else. An introduction, afterword and clear chronological table place Einstein's work in the context of the development of scientific knowledge. **Wings Of Fire - Abridged (Student Edition)** Arun Tiwari With, **Galileo (1564-1642) in 90 Minutes** John Gribbin, Mary Gribbin, 1997 Studies the life and works of Galileo Galilei and discusses how his theories and experiments changed the way people looked at the world. startling focus in this fascinating account When Galileo looked to the sky with his perspicillum or spyglass roughly 400 years ago he could not have fathomed the amount of change his astonishing findings a seemingly flat moon magically transformed into a dynamic crater filled orb and a large black sky suddenly held millions of galaxies would have on civilizations Reflecting on how Galileo s world compares with contemporary society this insightful analysis deftly moves from the cutting edge technology available in 17th century Europe to the unbelievable phenomena discovered during the last 50 years documenting important astronomical advances and the effects they have had over the years

The Essential Darwin John Gribbin,Mary Gribbin,2014-04-01 Charles Darwin was the epitome of the Victorian gentleman amateur scientist living entirely off inherited wealth and the income from his books At the same time however he was the most professional scientist of his day Darwin s life is full of contrast In his youth he seemed likely to become a wastrel yet he became a hard working and renowned scientist His family life in a small Kentish village was mostly idyllically happy but the loss of his favourite daughter Annie brought him intense misery that lasted long after her death Darwin shunned publicity but he became the most famous scientist of his time for an idea which shook the foundations of Victorian society Even today some people reject his idea evolution by natural selection without bothering to find out what Darwin said But it is one of those great achievements of the human intellect with which everyone should be acquainted
