## **Galileo's Finger The Ten Great Ideas Of Science:**

**Galileo's Finger** Peter William Atkins, 2003 Publisher's description Galileo's Finger takes the reader on an extraordinary journey that embraces the ten central ideas of current science By a great idea writes Peter Atkins I mean a simple concept of great reach an acorn of an idea that ramifies into a great oak tree of application a spider of an idea that can spin a great web and draw in a feast of explanation and elucidation With wit charm and patience Atkins leads the reader to an understanding of the essence of the whole of science from evolution and the emergence of complexity to entropy the spring of all change in the universe from energy the universalization of accountancy to symmetry the quantification of beauty and from cosmology the globalization of reality to spacetime the arena of all action *Galileo's Finger* Peter Atkins, 2023 Any literate person should be familiar with the central ideas of modern science the author asserts In this book Peter Atkins introduces his choice of the ten great ideas of science leading the reader through the emergence of concepts and showing how simple ideas can have enormous consequences

**Galileo's Finger** Peter Atkins, 2004-05-27 Any literate person should be familiar with the central ideas of modern science In his sparkling new book Peter Atkins introduces his choice of the ten great ideas of science With wit charm patience and astonishing insights he leads the reader through the emergence of the concepts and then presents them in a strikingly effective manner At the same time he works into his engaging narrative an illustration of the scientific method and shows how simple ideas can have enormous consequences His choice of the ten great ideas are Evolution occurs by natural selection in which the early attempts at explaining the origin of species is followed by an account of the modern approach and some of its unsolved problems Inheritance is encoded in DNA in which the story of the emergence of an understanding of inheritance is followed through to the mapping of the human genome Energy is conserved in which we see how the central concept of energy gradually dawned on scientists as they mastered the motion of particles and the concept of heat All change is the consequence of the purposeless collapse of energy and matter into disorder in which the extraordinarily simple concept of entropy is used to account for events in the world Matter is atomic in which we see how the concept of atoms emerged and how the different personalities of the elements arise from the structures of their atoms Symmetry limits guides and drives in which we see how concepts related to beauty can be extended to understand the nature of fundamental particles and the forces that act between them Waves behave like particles and particles behave like waves in which we see how old familiar ideas gave way to the extraordinary insights of quantum theory and transformed our perception of matter The universe is expanding in which we see how a combination of astronomy and a knowledge of elementary particles accounts for the origin of the universe and its long term future Spacetime is curved by matter in which we see the emergence of the theories of special and general relativity and come to understand the nature of space and time If arithmetic is consistent then it is incomplete in which we learn the origin of numbers and arithmetic see how the philosophy of mathematics lets us understand the nature of this most cerebral of subjects and are brought to the limits of its power C P

Snow once said not knowing the second law of thermodynamics is like never having read a work by Shakespeare This is an extraordinary exciting book that not only will make you literate in science but give you deep enjoyment on the way 100 Greatest Science Discoveries of All Time Kendall Haven,2007-02-28 Brimming with fascinating and fun facts about 100 scientific breakthroughs this collection presents the real stories behind the history of science at the same time offering a panoramic overview of the history of science and an introduction to some of the most important scientists in history Grades 6 and up Throughout history science has changed lives and dramatically altered the way in which the universe is perceived Focusing on the 100 most significant scientific events of all time from Archimedes discovery of the two fundamental principles underlying physics and engineering levers and buoyancy in 260 B C E to human anatomy Jupiter s moons electrons black holes the human genome and more storyteller Kendall Haven has created a ready reference for those seeking information on science discoveries

**The Personality of Math** Paul A. Wagner, Frank Fair,2022-06-06 If our goal is to broaden and deepen students awareness and understanding of mathematics we advance the idea that engaging students with what we metaphorically call the personality of math That is we think that students who engage with the math s 1 human champions 2 with its history and philosophy and 3 with the nature of its problems and inferential challenges are more likely to have a positive attitude toward math that will encourage greater learning

**A Modern Introduction to Theology** Philip Kennedy,2009-09-22 Philip Kennedy here offers the first book that any student with or without religious convictions can profitably use to get quickly to grips with the essentials of the Christian religion its history and its key thinkers its successes and its failures Most existing undergraduate textbooks of theology begin from essentially traditional positions on the Bible doctrine authority interpretation and God What makes Philip Kennedy s book both singularly important and uniquely different is that it has a completely new starting point The author contends that traditional Christian theology must extensively overhaul many of its theses because of a multitude of modern social historical and intellectual revolutions Offering a grand historical sweep of the genesis of the modern age and writing with panache and a magisterial grasp of the relevant debates conflicts and controversies A Modern Introduction to Theology moves a tired and increasingly incoherent discipline in genuinely fresh and exciting directions and will be welcomed by students and readers of the subject

**A World From Dust** Ben McFarland,2016-03-07 In A World From Dust Ben McFarland brings together the latest genetic chemical mathematic and geological evidence to tell the story of how life has evolved on this planet over billions of years

**The Golden Thread** Fuad Udemans,2013-09-23 This book is an account of a ten year experiment whereby the scientist became an entrepreneur so as to experience his own theoretical model applied in a live social system society Profit motives and the clinical nature of science became muddled with norms rules and laws of social systems and how different people applied and responded to these rules The insights to be gained from this journey are often surprising The book highlights many counter intuitive outcomes It also reveals how certain individuals interpret societys rules and norms despite their

design to ensure fair and equitable social systems Indeed the manipulation of social laws and standards by those with strong fields of power is self evident and it is explored in a unique manner Understanding how the field of power can be manipulated suggests that no matter how bleak ones current position may be it is very possible and relatively easy to escape conditions of poverty oppression and subjugation vital issues that citizens in all countries face today **The Burning**

**Answer** Keith Barnham,2015-05-15 Our society faces a choice We could be enjoying a sustainable lifestyle but we have chosen not to In three generations we have consumed half the oil produced by photosynthesis over eight million generations In two generations we have used half our uranium resources With threats from global warming oil depletion and nuclear disaster we are running out of options Solar power as Keith Barnham says is our necessary solution Barnham explains that the roots of solar energy lie in a little known equation  $E = hf$  an equation which was coincidentally celebrated and explained to the world by Einstein in the same year he discovered  $E = mc^2$  He alleges that the former equation has been overlooked in favor of the latter much to our detriment and Barnham is here to offer us a solution We can still turn things around and solar energy is the key In this provocative inspiring passionately argued book Keith Barnham outlines actions that any one and all of us can take to make an impact now and on future generations The Burning Answer is a solar manifesto for the new climate aware generation and a must read for climate change skeptics **Last Call: Humanity Hanging From A Cross Of Iron**

**And Our Escape To Another Planet** Daniel R Altschuler,2022-05-30 This book tries to look at human thought and action from a scientific perspective and in the process acquaints the reader with essential concepts about science and its history It takes a broad look at our present troubles without overlooking some crucial historical religious and political causes but places science at the center stage The author applies what he has learned throughout his career to go beyond science After an introduction setting the scene and a review of the scientific temper and the inexcusable ignorance of science by some leaders and many followers the author turns his sharp vision to look at other issues The most significant challenges are critical and global climate change caused by our activities stockpiles of nuclear weapons that are a constant threat population growth and increasing inequality at all levels These problems do have a profound ethical character and threaten to end forever with our misery producing a catastrophic convergence Written with rigor for all readers with many references and infused with relevant quotations the author s message is clear we need to change our ways drastically and urgently now or never But he offers not much in terms of a solution something done by many authors to sweeten the pill because as he argues beyond lofty declarations there is no real solution as the clock runs down leading to his dystopian view of the future

**Multiple Representations in Biological Education** David F. Treagust,Chi-Yan Tsui,2013-02-01 This new publication in the Models and Modeling in Science Education series synthesizes a wealth of international research on using multiple representations in biology education and aims for a coherent framework in using them to improve higher order learning Addressing a major gap in the literature the volume proposes a theoretical model for advancing biology educators notions of

how multiple external representations MERs such as analogies metaphors and visualizations can best be harnessed for improving teaching and learning in biology at all pedagogical levels The content tackles the conceptual and linguistic difficulties of learning biology at each level macro micro sub micro and symbolic illustrating how MERs can be used in teaching across these levels and in various combinations as well as in differing contexts and topic areas The strategies outlined will help students reasoning and problem solving skills enhance their ability to construct mental models and internal representations and ultimately will assist in increasing public understanding of biology related issues a key goal in today s world of pressing concerns over societal problems about food environment energy and health The book concludes by highlighting important aspects of research in biological education in the post genomic information age

*Reason and Wonder* Dave Pruett, 2012-05-08 In this enlightening and provocative exploration Dave Pruett sets out a revolutionary new understanding of our place in the universe one that reconciles the rational demands of science with the deeper tugs of spirituality Defining a moment in human self awareness four centuries in the making *Reason and Wonder* A Copernican Revolution in Science and Spirit offers a way to move beyond the either or choice of reason versus intuition a dichotomy that ultimately leaves either the mind or the heart wanting In doing so it seeks to resolve an age old conflict at the root of much human dysfunction including today s global ecological crisis An outgrowth of C David Pruett s breakthrough undergraduate honors course *From Black Elk to Black Holes Shaping Myth for a New Millennium* *Reason and Wonder* embraces the insights of modern science and the wisdom of spiritual traditions to re enchant the universe The new myth of meaning unfolds as the story of three successive Copernican revolutions cosmological biological and spiritual offers an expansive view of human potential as revolutionary as the work of Copernicus Galileo and Darwin

**Rethinking Leadership for a Green World** Andrew Taylor, 2022-03-20 First James Lovelock and recently Prince William and David Attenborough believe that we have reached a tipping point in the process of climate change Whether they are right or not it is certainly true that the impact of humankind upon the ecology of the earth has reached a point where real changes in human behaviour are required If managers are to be enablers of planetary survival then we need to develop a new approach to risk which explicitly includes ecological limits upon economic behaviour This implies a fundamental reorientation of their role in allocating resources to minimise risk and maximise reward This book brings together some of the brightest contemporary thinkers on leadership complexity and sustainability to consider the big ideas that we will need to make the changes required and to outline the major themes that can inform a new approach to constructing a green world It looks at how to ensure that local models of sustainability are able to flourish in the context of global networks and presents specific case studies of markets and organisations that offer insights into the development integrated solutions and the leadership lessons we can learn Combining both theory and practice this book serves to guide business managers and provides deeper insight and critical perspectives on some of the key issues facing leaders moving towards the green economy It also provides useful

supplementary reading for students in business and environmental studies      *Entropy and the Second Law of Thermodynamics* Robert Fleck, 2023-09-25 This book is a brief and accessible popular science text intended for a broad audience and of particular interest also to science students and specialists Using a minimum of mathematics a number of qualitative and quantitative examples and clear illustrations the author explains the science of thermodynamics in its full historical context focusing on the concepts of energy and its availability and transformation in thermodynamic processes His ultimate aim is to gain a deep understanding of the second law the increase of entropy and its rather disheartening message of a universe descending inexorably into chaos and disorder It also examines the connection between the second law and why things go wrong in our daily lives Readers will enhance their science literacy and feel more at home on the science side of author C P Snow's celebrated two culture science humanities divide and hopefully will feel more at home in the universe knowing that the disorder we deal with in our daily lives is not anyone's fault but Nature's      **A Mind Over Matter** Andrew Zangwill, 2021-01-08 A Mind Over Matter is a biography of the Nobel prize winner Philip W Anderson a person widely regarded as one of the most accomplished and influential physicists of the second half of the twentieth century Anderson 1923-2020 was a theoretician who specialized in the physics of matter including window glass and metals magnets and semiconductors liquid crystals and superconductors More than any other single person Anderson transformed the patchwork subject of solid state physics into the deep subtle and coherent discipline known today as condensed matter physics Among his many world class research achievements Anderson discovered an aspect of wave physics that had been missed by all previous scientists going back to Isaac Newton He became a public figure when he testified before Congress to oppose its funding of an expensive project intended exclusively for particle physics research Over the years he published many articles designed to influence a broad audience about issues where science impacted public policy and culture Anderson grew up in the American mid west was educated at Harvard and rose to the pinnacle of his profession during the first decade of his thirty five career as a theoretical physicist at Bell Telephone Laboratories Almost uniquely he spent many years working half time as a professor at the University of Cambridge and at Princeton University The outspoken Anderson enjoyed broad influence outside of physics when he helped develop and champion the concepts of emergence and complexity as organizing principles to help attack very difficult problems in technically challenging disciplines      **The Spacefaring Earth** Michael G. Smith, 2024-12-04 This engaging survey of the Space Age links science and technology with politics and popular culture war and peace and crises and controversies It examines the history of spaceflight as a mirror of human thought and action across the Earth The volume encompasses the new astronomy and sciences of the modern era the early dreamers and pioneers after 1903 the national competitions of the First World War the rocket states that prepared for the Second World War the rivalries and space race of the Cold War between the US and USSR as well as more recent developments including the Space Shuttle the International Space Station national space programs orbital technologies transhumanism and military and commercial

ventures in space It also stresses the importance of geography in the geopolitics of spaceflight competition and in the nature of the planetary biosphere Taking a chronological approach to lived human experience and threshold achievements the chapters show how these themes have been reflected in literature art music film and our new digital worlds This book is essential reading for students of the history of the Space Age as well as an excellent companion to courses on twentieth century science and technology the Cold War and American history *The March of Time* Friedel Weinert,2013-04-03 The aim of this interdisciplinary study is to reconstruct the evolution of our changing conceptions of time in the light of scientific discoveries It will adopt a new perspective and organize the material around three central themes which run through our history of time reckoning cosmology and regularity stasis and flux symmetry and asymmetry It is the physical criteria that humans choose relativistic effects and time symmetric equations or dynamic kinematic effects and asymmetric conditions that establish our views on the nature of time This book will defend a dynamic rather than a static view of time **Suitable Heresies** Graham Rabey,2009 The theory suggests that there is a structural similarity between certain basic brain forms and certain basic mind forms and that the former provide a credible explanation for the latter It does not suggest that the causative link has been proved thereby What is claimed is that in the jungle of brain mind research where fundamental physical evidence for speculation is often in short supply the theory provides a scientifically and philosophically arguable clearing and thus a hypothesis worthy of investigation by anyone interested in the mysteries of human thought One implication of the theory amounts to a central heresy namely that on the accumulating evidence our traditional and much cherished one truth thinking conventions will need to be replaced by two truth thinking conventions Another implication of the theory is that it now seems entirely possible that the emergence and nature of philosophy itself have been crucially dependent on our long human struggle to extract single responses from thinking equipment that appears necessarily i e anatomically double and circular the double cycles being mutually inverted **Creating a Classroom Community of Young Scientists** Jeffrey W. Bloom,2006-07-20 Creating a Classroom Community of Young Scientists helps teachers both pre service and in service to develop exciting science programs in their classrooms This book provides the groundwork for designing and implementing a science program that takes into account the latest research in teaching and learning It provides an approach that will capture children s imaginations stimulate their curiosity and create a strong foundation for their continued interest in and appreciation of science and the world in which they live The book is designed to be user friendly and offers an approach to teaching science that is exciting for teachers as well This thoroughly revised second edition focuses on making inquiry more explicit both in terms of the process of inquiry and teaching in ways that capitalize on children s curiosity and questions New material has also been added on U S and Canadian science standards as well as professional standards for teachers **Brain Versus Mind** Dukkyu Choi,2017-02-27 The book is divided into three partsThe Mind in Every Day Living The Mind and the Dream World and The Mind after Death Due to the immateriality of mind or

consciousness and the unknown mechanism thereof the terms such as consciousness mind thought emotion and the like are not clearly defined even in the twenty first century Choi Writes To discover the mechanism and to define the terms clearly are my concerns in this book He adds that one of his objectives is to prove continuity of consciousness after death The first five consciousnesses are our sense consciousnesses Choi explains while the sixth consciousness called the mano vijnana is generated by the sixth organ referred to as the organ of mind or root of mind What exactly that is Choi continues we do not know However it is crystal clear that the sixth organ is not the brain It must be a nonphysical and immaterialistic organ that is capable of reading something Choi goes on to explain the seventh consciousness called manas Unlike the first six consciousnesses this one does not have an organ It involves thinking cogitation and intellection The first six consciousnesses perceive and discriminate their corresponding objects and trigger to think so as to give rise to the seventh consciousness manas which is accumulated in the eighth consciousness alaya as seeds of mind cittas Choi continues adding that all mental activities are stored in alaya
