Gamma Lines On The Geometry Of Real And Complex Functions:

Gamma-Lines Griogor A. Barsegian, 2002-08-15 The history of mathematics is to a considerable extent connected with the study of solutions of the equation $f(x) = \text{const}$ for functions $f(x)$ of one real or complex variable Therefore it is surprising that we know very little about solutions of $u(x, y) = \text{const}$ for functions of two real variables These two solutions called level of sets are very important with regard to applications in physics biology and economics as they make a map of appropriate processes described by the function $u(x, y)$ for given parameters x, y This text explores a concept Gamma lines which generalizes the concept of levels of sets and at the same time the concept of a points The authors provide a book on Gamma lines for the broad specialist and show the large range of their field of applications The general methods proposed in this volume are useful for both physicists and engineers

Linear and Quasilinear Complex Equations of Hyperbolic and Mixed Types Guo Chun Wen, 2002-08-22 This volume deals with first and second order complex equations of hyperbolic and mixed types Various general boundary value problems for linear and quasilinear complex equations are investigated in detail To obtain results for complex equations of mixed types some discontinuous boundary value problems for elliptic complex equations are discusse

Agranovsky, Matania Ben-Artz, Catherine Bénéteau, Lavi Karp, Dmitry Khavinson, Simeon Reich, David Shkheoit, Gilbert Weinstein, Lawrence Zalcman, 2017 A co publication of the AMS and Bar Ilan University This volume contains the proceedings of the Seventh International Conference on Complex Analysis and Dynamical Systems held from May 10-15 2015 in Nahariya Israel The papers in this volume range over a wide variety of topics in the interaction between various branches of mathematical analysis Taken together the articles collected here provide the reader with a panorama of activity in complex analysis geometry harmonic analysis and partial differential equations drawn by a number of leading figures in the field They testify to the continued vitality of the interplay between classical and modern analysis

An Introduction to Complex Analysis Wolfgang Tutschke, Harkrishan L. Vasudeva, 2004-06-25 Like real analysis complex analysis has generated methods indispensable to mathematics and its applications Exploring the interactions between these two branches this book uses the results of real analysis to lay the foundations of complex analysis and presents a unified structure of mathematical analysis as a whole To

Barsegian, Ilpo Laine, Chung-Chun Yang, 2006-05-02 The Nevanlinna theory of value distribution of meromorphic functions one of the milestones of complex analysis during the last century was cited to extend the classical results concerning the distribution of entire functions to the more general setting of meromorphic functions Later on a similar reasoning has been applied to algebroid functions subharmonic functions and meromorphic functions on Riemann surfaces as well as to analytic functions of several complex variables holomorphic and meromorphic mappings and to the theory of minimal surfaces Moreover several applications of the theory have been exploited including complex differential and functional equations complex dynamics and Diophantine equations The main emphasis of this collection is to direct attention to a number of recently developed novel ideas and generalizations that relate to the development of value distribution theory and its applications In particular we mean a recent theory that replaces the conventional consideration of counting within a disc by an analysis of their geometric locations Another such example is presented by the generalizations of the second main theorem to higher dimensional cases by using the jet theory Moreover similar ideas apparently may be applied to several related areas as well such as to partial differential equations and to differential geometry Indeed most of these applications go back to the problem of analyzing zeros of certain complex or real functions meaning in fact to investigate level sets or level surfaces *Complex Analysis and Dynamical Systems V* Mark L'vovich Agranovskiĭ, Matania Ben-Artzi, Greg Galloway, Lavi Karp, Vladimir Maz'Ya, 2013-06-03 This volume contains the proceedings of the Fifth International Conference on Complex Analysis and Dynamical Systems held from May 22-27 2011 in Akko Acre Israel The papers cover a wide variety of topics in complex analysis and partial differential **Analysis as a Life**
