The Astrophysical Journal, 1908 Letters to the Editor issued as Part 2 and separately paged from v 148 1967 Beginning in 2009 the Letters published only online *Nanophotonic Materials* Ralf B. Wehrspohn, Heinz-Siegfried Kitzerow, Kurt Busch, 2008-09-08 Nanophotonic Materials Photonic Crystals Plasmonics and Metamaterials summarizes the work and results of a consortium consisting of more than 20 German research groups concentrated on photonics crystals research over the last seven years Illustrated throughout in full color the book provides an overview of these novel materials spanning the entire range from fundamentals to applications A Comprehensive Treatise on Inorganic and Theoretical Chemistry: B, Al, Ga, In, Tl, Sc, Ce, and Rare Earth Metals, C (Part I) Joseph William Mellor, 1924 *The Gap Symmetry and Fluctuations in High-Tc Superconductors* Julien Bok, Guy Deutscher, Davor Pavuna, Stuart A. Wolf, 2006-03-07 Since the discovery in 1986 of high temperature superconductors by J G Bednorz and K A Müller a considerable progress has been made and several important scientific problems have emerged Within this NATO Advanced Study Institute our intention was to focus mainly on the controversial topic of the symmetry of the superconducting gap and given the very short coherence length the role of fluctuations The Institute on The Gap Symmetry and Fluctuations in High Superconductors took place in the Institut d Etudes Scientifiques de Corse in Corsica France between 13 September 1997 The 110 participants from 18 countries yet 30 nationalities including 23 full time lecturers have spent two memorable weeks in this charming Mediterranean resort All lecturers were asked to prepare pedagogical papers to clearly present the central physical idea behind specific model or experiment The better understanding of physics of high temperature superconductivity is certainly needed to guide the development of applications of these materials in high and weak current devices **Advances in Electrical and Computer Technologies** Thangaprakash Sengodan, Sanjay Misra, Murugappan M, 2025-07-04 This book comprises a selection of papers presented at the Sixth International Conference on Advances in Electrical and Computer Technologies ICAECT 2024 It compiles groundbreaking research and advancements in the field of electrical engineering electronics engineering computer engineering and communication technologies The book touches upon a wide array of topics including smart grids soft computing techniques in power systems smart energy management systems and power electronics under the Electrical Engineering track and biomedical engineering antennas and waveguides image and signal processing and broad band and mobile communication under the Electronics Engineering track With special emphasis on Computer Engineering this book highlights emerging trends in computer vision pattern recognition cloud computing pervasive computing intelligent systems artificial intelligence neural network and fuzzy logic machine learning deep learning data science video processing and wireless communication This is a valuable resource for students researchers and engineers within the field of innovative research and practical applications of electrical and computer technologies **Lectures On Phase Transitions** A S Shumovsky, V I Yukalov, 1990-11-30 This book treats the problem of phase transitions emphasizing

the generality and universality of the methods and models used The course is basically concentrated on the problems of vacuum degeneration in macroscopic systems and a fundamental concept of quasiaverages by Bogolubov playing a special role in the theory of phase transitions and critical phenomena An analysis of the connection between phase transition and spontaneous symmetry breaking in a macroscopic system allows a unique description of both first and second order phase transitions The unique features of this book are i a unique approach of describing first as well as second order phase transitions based on the Bogolubov concept of quasi averages ii a detailed presentation of the material and at the same time a review of modern problems iii a general character of developed ideas that could be applied to various particular systems of condensed matter physics nuclear physics and high energy physics

Nanoscience and Engineering in Superconductivity Victor Moshchalkov, Roger Woerdenweber, Wolfgang Lang, 2010-11-10 For emerging energy saving technologies superconducting materials with superior performance are needed Such materials can be developed by manipulating the elementary building blocks through nanostructuring For superconductivity the elementary blocks are Cooper pair and fluxon vortex This book presents new ways how to modify superconductivity and vortex matter through nanostructuring and the use of nanoscale magnetic templates The basic nano effects vortex and vortex antivortex patterns vortex dynamics Josephson phenomena critical currents and interplay between superconductivity and ferromagnetism at the nanoscale are discussed Potential applications of nanostructured superconductors are also presented in the book

Superconducting State Vladimir Z. Kresin, Hans Morawitz, Stuart A. Wolf, 2014 This book describes fundamentals of the superconducting state and latest developments in the field It represents the state of the art status of the theory and key experiments for both historically important conventional superconductors and novel technologically significant superconductors
