Gap Junctions In The Nervous System:

Gap Junctions in the Nervous System David C. Spray, Rolf Dermietzel, 2013-06-29 This book deals with the types of gap junction proteins connexins and their distribution within the nervous system the physiological properties of channels formed of each connexin and the role of gap junction channels in functions of normal and pathological brain and peripheral nerve Although glial tissue is emphasized additional groups of chapters deal with neurons in the central nervous system and with the retina

Gap Junctions in the Nervous System David C. Spray, Rolf Dermietzel, 1996 *Intercellular Communication in the Nervous System* Robert Malenka, 2010-05-22 Intercellular communication is part of a complex system of communication that governs basic cellular activities and coordinates cell actions The ability of cells to perceive and correctly respond to their environment is the basis of growth and development tissue repair and immunity as well as normal tissue homeostasis Errors in cellular information processing are responsible for diseases such as cancer autoimmunity diabetes and neurological and psychiatric disorders There is substantial drug development concentrating on this and intercellular communication is the basis of much of neuropharmacology By understanding cell signaling diseases may be treated effectively and theoretically artificial tissues may be yielded Neurotransmitters receptors synaptic structure and organization gap junctions neurotrophic factors and neuropeptides are all explored in this volume as are the ways in which signaling controls neuroendocrinology neuroimmunology and neuropharmacology Intercellular Communication in the Nervous System provides a valuable desk reference for all scientists who consider signaling Chapters offer impressive scope with topics addressing neurotransmitters receptors synaptic structure and organization neuropeptides gap junctions neuropharmacology and more Richly illustrated in full color with over 200 figures Contributors represent the most outstanding scholarship in the field with each chapter providing fully vetted and reliable expert knowledge

Gap Junctions in the Nervous System Through 1976, 1977 **Astrocytes in (Patho)Physiology of the Nervous System** Vladimir Parpura, Philip G. Haydon, 2008-12-11 Astrocytes were the original neuroglia that Ramon y Cajal visualized in 1913 using a gold sublimate stain This stain targeted intermediate filaments that we now know consist mainly of glial fibrillary acidic protein a protein used today as an astrocytic marker Cajal described the morphological diversity of these cells with some astrocytes surrounding neurons while the others are intimately associated with vasculature We start the book by discussing the heterogeneity of astrocytes using contemporary tools and by calling into question the assumption by classical neuroscience that neurons and glia are derived from distinct pools of progenitor cells Astrocytes have long been neglected as active participants in intercellular communication and information processing in the central nervous system in part due to their lack of electrical excitability The following chapters review the nuts and bolts of astrocytic physiology astrocytes possess a diverse assortment of ion channels neurotransmitter receptors and transport mechanisms that enable the astrocytes to respond to many of the same signals that act on neurons Since astrocytes can detect chemical transmitters that are released from neurons and can

release their own extracellular signals there is an increasing awareness that they play physiological roles in regulating neuronal activity and synaptic transmission In addition to these physiological roles it is becoming increasingly recognized that astrocytes play critical roles during pathophysiological states of the nervous system these states include gliomas Alexander disease and epilepsy to mention a few

New Insights on Neuron and Astrocyte Function from Cutting-Edge Optical Techniques Srdjan D. Antic,Bradley James Baker,Marco Canepari,2020-01-06 **Nervous Systems and Control of Behavior** Charles Dorsett Derby,Martin Thiel,2014 Covers all aspects of crustacean biology physiology behavior and evolution *Nervous Systems and Control of Behavior* Charles Derby,Martin Thiel,2014-09-24 Crustacean

Nervous Systems and their Control of Behavior is the third volume of the series The Natural History of the Crustacea This volume is on the functional organization of crustacean nervous systems and how those nervous systems produce behavior It complements other volumes on related topics of feeding biology reproductive biology endocrine systems and behavioral ecology There is a rich history of the study of the neurobiology of crustaceans going back over 150 years This has included studies on how their nervous systems allow them to perform behaviors that are adapted to their particular environments as well as studying them as model organisms to understand basic biomedical principles about neural function such as sensory transduction and processing synaptic transmission and integration neuromodulation and learning and memory The volume has three sections that build progressively on each other The first section is on the basic organizational features of the crustacean nervous system and the principles upon which it is built The second section is on sensory ecology the organization of each sensory system and how it is used in intra and interspecific interactions within an ecological context The third section uses case studies of how crustacean nervous systems are organized to perform complex behaviors and interactions such as walking escape social interactions and memory and learning Taken together the 20 chapters synthesize our modern understanding of the neural control of behavior in crustaceans based on the most recent technologies in physiological recording molecular biology and computational science This volume will be useful to students and researchers as a concise summary of current knowledge of crustacean neuroscience Neurochemical Systems and Signaling Ghulam Md

Ashraf,2023-06-30 The human brain is made up of billions of neurons that communicate with each other through chemical messengers which are referred to as neuroactive substances These neuroactive substances include neurotransmitters neuromodulators and neurohormones Some neurotransmitters also act as neuromodulators and neurohormones It is unlikely that there would ever be a consensus about the meanings of these neuroactive substances including neurotransmitters since the term neurotransmitter has traditionally been used very loosely indeed to include neurotransmitters neurohormones and neuromodulators Any alterations in the functioning of these neuroactive substances can cause diseases The brain is the ultimate center that regulates all neurological and behavioral aspects of the body through neuronal communications mediated via various neurochemicals Thus neurological and psychiatric disorders are in most cases the result of disturbed

neurochemical balance Besides the multifaceted involvement of billions of neuronal cells the central nervous system is a complex organization with a diverse number of neurotransmitter systems as compared to the autonomic nervous system in which the parasympathetic system works on the rest and digest phenomenon and the sympathetic system works on the fight or flight phenomenon There are more than 20 neurotransmitter systems and multiple receptors for each neurotransmitter Any alterations in neurochemical balance are expressed in the form of neurological or psychiatric disorders such as epilepsy Parkinson s disease Alzheimer s disease psychosis depression etc Acetylcholine noradrenaline dopamine and 5 HT are of the utmost importance among neurotransmitters for their profound role in the pathogenesis of various neurological and psychiatric disorders in humans Yet the involvement of various proteins and peptides such as neurotrophic factors growth factors and endogenous chemical compounds cannot be ignored Day by day the suffering of people due to an imbalance of neurotransmitters is increasing Various factors for example stress diet genetics and toxins such as alcohol and nicotine contribute to this imbalance This imbalance may lead to mental health complaints The main purpose of this book is to give a comprehensive overview of the neurological diseases associated with neurochemical imbalances This book will help readers gain a comprehensive understanding of neuronal signaling and related neurological disorders as well as status and future opportunities and challenges It will provide a brief account of neurotransmission as either a study or high yield revision aid

Communication in Nervous and Immune System Eckart D. Gundelfinger, Constanze Seidenbecher, Burkhard Schraven, 2006-09-08 At first glance the nervous and immune systems appear very different However both systems have developed mechanisms for memory formation though of quite different quality and significance for the organism One striking

example is that both systems form and communicate via synapses armed with similar sets of proteins This collection of reviews contributed by internationally recognized immunologists and molecular and cellular neurobiologists puts side by side cellular communication devices and signaling mechanisms in the immune and nervous systems and discusses mechanisms of interaction between the two systems the significance of which has only recently been fully appreciated **The**

Somatotrophic Axis in Brain Function Fred Nyberg, 2005-12-12 The somatotrophic axis is one of the major hormonal systems regulating postnatal growth in mammals It interacts with the central nervous system on several levels Growth hormone GH and insulin like growth factor I IGF I receptors are expressed in many brain areas including the hippocampus pituitary and hypothalamus GH and IGF I are important factors in the development and differentiation of the CNS and have protective properties in dementia as well as in traumatic and ischaemic injury of the CNS Also GH has an important impact on mood and well being with GH secretory capacity being reduced in depression This volume will include chapters 1 on basic knowledge on GH IGF 1 2 on localization of GH IGF 1 and their receptors in the CNS including blood brain barrier transport of both hormones 3 on actions of the two hormones on CNS function basic science 4 on clinical aspects of GH IGF 1 in relation to various CNS functions and disorders and finally 5 on some future perspectives in this area of science Contents are well balanced and cover a variety of relevant topics from basic to clinical research International selection of authors with a good representation of the research on growth hormones A timely publication which will be useful to scientists in both basic and clinical research **From Molecules to Networks** Ruth Heidelberger, M. Neal Waxham, John H. Byrne, James L.

Roberts, 2009-01-27 An understanding of the nervous system at virtually any level of analysis requires an understanding of its basic building block the neuron From Molecules to Networks provides the solid foundation of the morphologic biochemical and biophysical properties of nerve cells All chapters have been thoroughly revised for this second edition to reflect the significant advances of the past 5 years The new edition expands on the network aspects of cellular neurobiology by adding a new chapter Information Processing in Neural Networks and on the relation of cell biological processes to various neurological diseases The new concluding chapter illustrates how the great strides in understanding the biochemical and biophysical properties of nerve cells have led to fundamental insights into important aspects of neurodegenerative disease Written and edited by leading experts in the field the second edition completely and comprehensively updates all chapters of this unique textbook Discusses emerging new understanding of non classical molecules that affect neuronal signaling Full colour professional graphics throughout Includes two new chapters Information Processing in Neural Networks describes the principles of operation of neural networks and the key circuit motifs that are common to many networks in the nervous system Molecular and Cellular Mechanisms of Neurodegenerative Disease introduces the progress made in the last 20 years in elucidating the cellular and molecular mechanisms underlying brain disorders including Amyotrophic Lateral Sclerosis ALS Parkinson disease and Alzheimer s disease Biomedical Index to PHS-supported Research ,1990 Connexins
