Electric Arcs Experiments Upon Arcs Between, Different Electrodes in Various, Environments and Their Explanation (Classic Reprint) Clement D. Child, 2015-08-08 Excerpt from Electric Arcs Experiments Upon Arcs Between Different Electrodes in Various Environments and Their Explanation While the electric arc is one of the most common things of modern life an understanding of it is not common This is largely due to the difficulty of becoming familiar with the investigations which have been made on this subject There have indeed been many articles published concerning it but they are scattered through many publications and the data given by different experimenters are not consistent with each other and none of the explanations are entirely satisfactory The Electric Arc by Mrs Hertha Ayrton gave an account of the experiments which were performed prior to 1898 but very little investigation had been made at that time of any arc except the open carbon arc and none of the explanations based on the ionic theory had been given so that by far the greater part of what is now known concerning the arc could not then be described An excellent work in German Der elektrische Lichtbogen by Berthold Monash has more recently appeared but this deals but briefly with the theoretical side and does not meet the requirements of those who would read English rather than German About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works *Electric Arcs; Experiments Upon Arcs Between Different Electrodes in Various Environments and Their Explanation* Clement Dexter Child, 1913
