Understanding Electric Utilities and De-Regulation H. Lee Willis, Lorrin Philipson, 2018-10-03
Power interruptions of the scale of the North American Blackout of 2003 are rare but they still loom as a possibility Will the aging infrastructure fail because deregulated monopolies have no financial incentives to upgrade Is centralized planning becoming subordinate to market forces Understanding Electric Utilities and De Regulation Second Edition provides an updated non technical description that sheds light on the nature of the industry and the issues involved in its transition away from a regulated environment The book begins by broadly surveying the industry from a regulated utility structure to the major concepts of de regulation to the history of electricity the technical aspects and the business of power Then the authors delve into the technologies and functions on which the industry operates the many ways that power is used and the various means of power generation including central generating stations renewable energy and single household size generators The authors then devote considerable attention to the details of regulation and de regulation To conclude one new chapter examines aging infrastructures and reliability of service while another explores the causes of blackouts and how they can be prevented Based on the authors extensive experience Understanding Electric Utilities and De Regulation Second Edition offers an up to date perspective on the major issues impacting the daily operations as well as the long term future of the electric utilities industry

Subcommittee on Energy Development and Applications,1986 *Innovation in Energy Law and Technology* Donald Zillman, Lee Godden, LeRoy Paddock, Martha Roggenkamp, 2018-03-09 There are few existential challenges more serious in the twenty first century than energy transition As current trends in energy production prove unsustainable for the environment energy security and economic development innovation becomes imperative Yet with technological challenges come legal challenges Zillman Godden Paddock and Roggenkamp assemble a team of experts in their field to debate how the law may have to adapt to changes in the area What regulatory approach should be used How do we deal with longer term investment horizons and so called stranded assets such as coal fired power stations And can a form of energy justice be achieved which encompasses human rights sustainable development goals and the eradication of energy poverty With a concept as unwieldy as energy innovation it is high time for a text tackling changes which are dynamic and diverse across different communities and which provides a thorough examination of the legal ramifications of the most recent technological changes This book which be of vital importance to lawyers policy makers economists and the general reader Operation, Regulation and Planning of Power and Natural Gas Systems Javier Reneses, Antonio Bello, 2021-01-12 Worldwide electricity systems are evolving to adapt to a low carbon economy in which increasingly more renewable energy resources are being integrated These changes in turn make the development of new methods tools and approaches to deal with the operation and planning of electricity systems necessary On the other hand new regulations must be developed in order to deal with a wide integration of renewable and distributed energy resources both from a generation and a network transmission and distribution perspective Furthermore the natural gas sector is going through significant transformation related mainly to both technological advances and strategic policy decisions While there is great uncertainty in the future of natural gas within the global energy matrix it is clear that it will play a major role during the next years as a bridge fuel towards a decarbonized economy In this context natural gas systems are undergoing deep transformations necessitating the development of new tools to operate and plan gas systems as well as new approaches to regulate them This book therefore seeks to contribute to the energy transformation agenda through original contributions focused on both power and natural gas systems addressing innovative operation and planning methods as well as regulation of both energy systems Electric Power United States.
