Transport Revolutions Richard Gilbert, Anthony Pearl, 2012-05-16 Transport Revolutions Moving People and Freight without Oil sets out the challenges to our growing dependence on transport fuelled by low priced oil These challenges include an early peak in world oil production and profound climate change resulting in part from oil use It proposes responses to ensure effective secure movement of people and goods in ways that make the best use of renewable sources of energy while minimizing environmental impacts Transport Revolutions synthesizes engineering economics environment organization policy and technology and draws extensively on current data to present important conclusions The authors argue that land transport in the first half of the 21st century will feature at least two revolutions One will involve the use of electric drives rather than internal combustion engines Another will involve powering many of these drives directly from the electric grid as trains and trolley buses are powered today rather than from on board fuel They go on to discuss marine transport whose future is less clear and aviation which could see the most dramatic breaks from current practice With its expert analysis of the politics and business of transport Transport Revolutions is essential reading for professionals and students in transport energy town planning and public policy *Building Services Design for Energy Efficient Buildings* Paul Tymkow, Savvas Tassou, Maria Kolokotroni, Hussam Jouhara, 2013-07-18 The role and influence of building services engineers is undergoing rapid change and is pivotal to achieving low carbon buildings However textbooks in the field have largely focused on the detailed technicalities of HVAC systems often with little wider context This book addresses that need by embracing a contemporary understanding of energy efficiency imperatives together with a strategic approach to the key design issues impacting upon carbon performance in a concise manner The key conceptual design issues for planning the principal systems that influence energy efficiency are examined in detail In addition the following issues are addressed in turn Background issues for sustainability and the design process Developing a strategic approach to energy efficient design How to undertake load assessments System comparison and selection Space planning for services Post occupancy evaluation

of completed building services In order to deliver sustainable buildings a new perspective is needed amongst building and services engineering designers from the outset of the conceptual design stage and throughout the whole design process In this book students and practitioners alike will find the ideal introduction to this new approach
