Catalog** National Institute of Standards and Technology (U.S.), 1985 *Computer-Based Instruction in Military Environments* Robert J. Seidel, P.D. Weddle, 2012-12-06 This collection of papers is the result of a symposium sponsored by NATO's Defense Research Group Panel VIII in the Spring of 1985 The symposium came into being when it became obvious to the NATO countries that research development and utilization of advanced technologies for training was the best means of increasing both training effectiveness and efficiency This symposium was the second in a series of three devoted to training

The series was structured to cover all aspects of training The first series addressed the value of training the second one dealt with the application of training technologies and the third and last of the series focused on academic issues concerned with the effect of prior learning on subsequent learning The fact that a major American publisher has determined that computer based instruction is the technology of greatest interest to the NATO community is not surprising Advances in microprocessor technology have revolutionized both how and where we train During this symposium there were a limited number of carefully chosen exhibits to demonstrate the various applications of computer based training techniques In the following papers you will find both a practical and scientific basis for the way current and future training and training systems should be designed applied and utilized We know that training must be done faster and more effectively

A Nation Transformed by Information Alfred D. Chandler Jr., James W. Cortada, 2000-08-10 This book makes the startling case that North Americans were getting on the information highway as early as the 1700 s and have been using it as a critical building block of their social economic and political world ever since By the time of the founding of the United States there was a postal system and roads for the distribution of mail copyright laws to protect intellectual property and newspapers books and broadsides to bring information to a populace that was building a nation on the basis of an informed electorate In the 19th century Americans developed the telegraph telephone and motion pictures inventions that further expanded the reach of information In the 20th century they added television computers and the Internet ultimately connecting themselves to a whole world of information From the beginning North Americans were willing to invest in the infrastructure to make such connectivity possible This book explores what the deployment of these technologies says about American society The editors assembled a group of contributors who are experts in their particular fields and worked with them to create a book that is fully integrated and cross referenced
