 when they have received no systematic instruction in these subjects whatsoever These ideas and interpretations are a natural  
 result of everyday experience of practical physical activities of talking with other people and of the media This book  
 documents and explores the ideas of school students aged 10 16 about a range of natural phenomena such as light heat force  
 and motion the structure of matter and electricity It also examines how students conceptions change and develop with  
 teaching The editors have brought together science educators who come from different parts of the work but whose work is

 will be helpful in making science teaching and learning more rewarding for teachers and children alike
