**The Electron Microprobe** T. D. McKinley, K. F. J. Heinrich, David Beryle Wittry, 1966      **Scanning Electron Probe Microanalysis** Kurt F. J. Heinrich, 1967 The combination of electron microprobe x ray emission spectrometry with the scanning techniques first developed for the scanning electron microscope permits using the scanning electron probe as a microscope sensitive to elemental composition This technique is particularly useful in the many applications in which spatial distribution of one or more elements in a specimen is more important than local composition Although oscilloscope representation of probe scanning is usually obtained by the simple technique of producing a dot of light for each arriving photon more sophisticated scanning techniques such as expanded contrast registration and concentration mapping can provide more quantitative information Signals other than x rays such as target current electron backscatter or cathodoluminescence may be used for image formation Electron beam scanning can also be performed in a discontinuous fashion so that the electron beam irradiates in succession a number of spots arranged in a square or rectangular pattern and the number of photons registered in each position is retained in the memory of a multichannel analyzer The application of these diverse scanning techniques is illustrated Author      (Japan), 197?      **NBS Technical Note** , 1967-02      **Activities of the NBS Spectrochemical Analysis Section** Bourdon Francis Scribner, Institute for Materials Research (U.S.). Analytical Chemistry Division. Spectrochemical Analysis Section, 1966 Activities in optical spectrometry included development of programs for calculations on a time sharing computer measurement of arc temperatures applications of the laser probe and the plasma jet and studies on atomic absorption spectrometry In x ray spectroscopy there were some modifications of equipment improvements in computation methods and several applications Improvements and additions were made to the electron probe analyzer along with studies on measurement techniques including nondispersive analysis and computation procedures The spark source mass spectrometer was also modified and a new analog computer has been built and tested for reduction of photographic plate data applications of this instrument to analyses of pure materials are described Enrichment methods are being studied for the analysis of pure materials by emission spectroscopy particularly with an electro deposition technique Homogeneity studies and analyses were performed in the development of standard reference materials Author      **Electron Beam Microanalysis , Determination of Nonmetallic Compounds in Steel** Committee E-3 Staff, 1966      **Applications of Modern Metallographic Techniques** American Society for Metals, 1970      NBS Special Publication , 1968      *Analytical Mass Spectrometry Section: Instrumentation and Procedures for Isotopic Analysis* William R.
