Electron Processes in Mis-structure Memories A. F. Plotnikov, 1989 Electron Processes In Mis Structures Memories Proceedings Of The Lebedev Physics Institute Academy Of Science **Self Focusing of Relativistic Electron Bunches in Plasma** Valery B. Krasovitskii, 2008 This volume presents the non linear theory of electrostatic focusing of an electron beam split into bunches under conditions when the plasma permittivity at the modulation frequency is negative and the effective Coulomb force acting on the electron bunches is reversed Conditions for the spatial equilibrium between the bunch and plasma emission as well as the dynamics of the formation of focussed bunches are confirmed by solving both analytically and numerically the self consistent set of equations Atomic and Ionic Spectra and Elementary Processes in Plasma Igor' Il'ich Sobel'man, 1992 Eight highly technical studies explore a wide range of problems involved in investigating the short wavelength emission of the solar corona The topics include the experimental results from solar X ray investigations the calculated excitation cross sections for collisions of atoms and ions with charged particles and spectra of plasmas Annotation

Instabilities of Relativistic Electron Beam in Plasma Valery B. Krasovitskii, 2008 This book is devoted to the non linear theory of the collective interaction between a modulated beam of relativistic charged particles and narrow electromagnetic and Langmuir wave packets in plasma or gas slow wave systems Regular oscillations excited by a relativistic beam under the conditions of Cherenkov resonance and the anomalous Doppler effect can be used to generate coherent microwave radiation and accelerate charged particles in plasma *New Developments in Quantum Cosmology Research* Albert Reimer, 2005 Horizons in World Physics Volume 247 New Developments in Quantum Cosmology Research **New Topics in Theoretical Physics** Henk F. Arnoldus, Thomas F. George, 2007 Although the various branches of physics differ in their experimental methods and theoretical approaches certain general principles apply to all of them The forefront of contemporary advances in physics lies in the submicroscopic regime whether it be in atomic nuclear condensed matter plasma or particle physics or in quantum optics or even in the study of stellar structure All are based upon quantum theory i e quantum mechanics and quantum field theory and relativity which together form the theoretical foundations of modern physics Many physical quantities whose classical counterparts vary continuously over a range of possible values are in quantum theory constrained to have discontinuous or discrete values The intrinsically deterministic character of classical physics is replaced in quantum theory by intrinsic uncertainty According to quantum theory electromagnetic radiation does not always consist of continuous waves instead it must be viewed under some circumstances as a collection of particle like photons the energy and momentum of each being directly proportional to its frequency or inversely proportional to its wavelength the photons still possessing some wavelike characteristics This book presents state of the art research from around the world **Models and Methods of High-Tc Superconductivity** J. K. Srivastava, Sadasiva Madiraju Rao, 2003 The articles in this exceptional book contain regular papers extended papers and reviews and thus vary in length and are useful for all kinds of audience They describe as

S. Demidov, 2001 This important book gives an interconnected presentation of some basic ideas concepts results of the theory of generalised functions first of all in the framework of the theory of distributions and equations of mathematical physics A part of the material is given according to the scheme definition theorem proof This scheme is convenient for presenting results in clear and concentrated form However it seems reasonable to give a student the possibility not only to study a priori given definitions and proofs of theorems but also to discover them while considering the problems involved A series of sections serve this purpose Moreover a part of the material is given as exercises and problems

On the Structure of Physical Vacuum and a New Interaction in Nature (theory, Experiment, Applications) I_U. A. Baurov, 2000 In the book an unconventional physical model of creation of the observed physical space from a finite set of special discrete objects byuons is presented The global space anisotropy associated with a cosmological vectorial potential appearing in the definition of byuons as well as a new interaction due to this anisotropy are predicted Results of an experimental investigation of the proposed new interaction are given A new method of power production based on the new interaction as well as a new principle of motion of objects in nature with the use of physical space as a support medium are advanced The book is intended for the general reading public physicists theorists and experimenters astrophysicists engineers specialists in space technology and power engineering and physical students
