**Einstein's Revolution: A Study Of Theory Unification** Rinat M. Nugayev, 2018-03-06 Einstein's Revolution A Study of Theory Unification gives students of physics and philosophy and general readers an epistemological insight into the genesis of Einstein's special relativity and its further unification with other theories. The book starts with an introductory analysis of the reasons for mature theory change in science. This leads to a discussion about special relativity's genesis. It is contended that Einstein's ingenious approach to special relativity's creation substantially distinguishes him from Lorentz's and Poincaré's invaluable impacts. Turns to be a milestone of Maxwellian electrodynamics, statistical mechanics, and thermodynamics reconciliation design. Special relativity turns out to be grounded on Einstein's breakthrough 1905 light quantum hypothesis. Eventually, the author amends the received view on the general relativity's genesis by stressing that the main reason for Einstein's victory over the rival programmes of Abraham and Nordström was a unificationist character of Einstein's research programme.

**Einstein's Revolution** Elie Zahar, 1989 The author applies the methodology of scientific research programmes to the origins of relativity, showing how Eddington, Lorentz, Poincaré, Planck, and Weyl were driven by mathematical heuristics to make their various contributions to Einstein's programme.

**Einstein's Revolution** Elie Zahar, 1989 The author applies the methodology of scientific research programmes to the origins of relativity, showing how Eddington, Lorentz, Poincaré, Planck, and Weyl were driven by mathematical heuristics to make their various contributions to Einstein's programme.

**Poincaré's Philosophy** Elie Zahar, 2001 Henri Poincaré 1854-1912 was one of the greatest mathematicians and philosophers of all time. He founded topology and made important contributions to theoretical physics. Yet despite his numerous achievements, Poincaré never constructed a systematic philosophy. In this book, Elie Zahar presents Poincaré's work for the first time as a unified system of thought.

**Philosophy, Methodology and Educational Research** David Bridges, Richard D. Smith, 2007-10-22 This book evaluates the increasingly wide variety of intellectual resources for research methods and methodologies and investigates what constitutes good educational research. Written by a distinguished international group of philosophers of education, it questions what sorts of research can usefully inform policy and practice and what inferences can be drawn from different kinds of research. Demonstrates the critical engagement of philosophers of education with the wider educational research community and illustrates the benefits that can accrue from such engagement.

**Victorian Relativity** Christopher Herbert, 2010-11-15 One of the articles of faith of twentieth-century intellectual history is that the theory of relativity in physics sprang in its essentials from the unaided genius of Albert Einstein; another is that scientific relativity is unconnected to ethical, cultural, or epistemological relativisms. *Victorian Relativity* challenges these assumptions, unearthing a forgotten tradition of avant-garde speculation that took as its guiding principle the negation of the absolute and set itself under the militant banner of relativity. Christopher Herbert shows that the idea of relativity produced revolutionary changes in one field after another in the nineteenth century. Surveying a long line of thinkers including Herbert Spencer, Charles

Darwin Alexander Bain W K Clifford W S Jevons Karl Pearson James Frazer and Einstein himself Victorian Relativity argues that the early relativity movement was bound closely to motives of political and cultural reform and in particular to radical critiques of the ideology of authoritarianism Recuperating relativity from those who treat it as synonymous with nihilism Herbert portrays it as the basis of some of our crucial intellectual and ethical traditions

**Time, Space and Philosophy** Christopher Ray, 2002-09-11 This book provides a comprehensive up to date and accessible introduction to the philosophy of space and time Ray considers in detail the central questions of space and time which arise from the ideas of Zeno Newton Mach Leibniz and Einstein Time Space and Philosophy extends the debate in many areas absolute simultaneity is examined as well as black holes the big bang and even time travel Time Space and Philosophy will be invaluable to the student of philosophy and science and will be of considerable interest to mathematics students The clear non technical approach should also make it suitable for the general reader

Appraising Lakatos György Kampis, L. Kvasz, Michael Stöltzner, 2013-06-29 Imre Lakatos 1922 1974 was one of the protagonists in shaping the new philosophy of science More than 25 years after his untimely death it is time for a critical re evaluation of his ideas His main theme of locating rationality within the scientific process appears even more compelling today after many historical case studies have revealed the cultural and societal elements within scientific practices Recently there has been above all an increasing interest in Lakatos philosophy of mathematics which emphasises heuristics and mathematical practice over logical justification But suitable modifications of his approach are called for in order to make it applicable to modern axiomatised theories Pioneering historical research in England and Hungary has unearthed hitherto unknown facts about Lakatos personal life his wartime activities and his involvement in the political developments of post war Europe From a communist activist committed to Gyrgyi Lukcs thinking Lakatos developed into a staunch anti Marxist who found his intellectual background in Popper's critical rationalism The volume also publishes for the first time a part of his Debrecen Ph D thesis and it is concluded by a bibliography of his Hungarian writings

The Myth of the Closed Mind Ray Scott Percival, 2012 Religious zeal suicide terrorism passionate commitment to ideologies and the results of various psychological tests are often cited to show that humans are fundamentally irrational The author examines all such supposed examples of irrationality and argues that they are compatible with rationality Rationality does not mean absence of error but the possibility of correcting error in the light of criticism In this sense all human beliefs are rational they are all vulnerable to being abandoned when shown to be faulty

**Relativistic Celestial Mechanics of the Solar System** Sergei Kopeikin, Michael Efroimsky, George Kaplan, 2011-09-26 This authoritative book presents the theoretical development of gravitational physics as it applies to the dynamics of celestial bodies and the analysis of precise astronomical observations In so doing it fills the need for a textbook that teaches modern dynamical astronomy with a strong emphasis on the relativistic aspects of the subject produced by the curved geometry of four dimensional spacetime The first three chapters review the fundamental principles of celestial mechanics and of special and general relativity This background material forms the basis for understanding relativistic reference frames the celestial mechanics of N body systems and high precision astrometry navigation and geodesy which are then treated in the following five chapters The final chapter provides an overview of the new field of applied relativity based on recent recommendations from the International Astronomical Union The book is suitable for teaching advanced undergraduate honors programs and graduate courses while equally serving as a reference for professional research scientists working in relativity and dynamical astronomy The authors bring their extensive theoretical and practical experience to the subject Sergei Kopeikin is a professor at the University of Missouri while Michael Efroimsky and George Kaplan work at the United States Naval Observatory one of the world's premier institutions for expertise in astrometry celestial mechanics and timekeeping

**Interactions** Vincent F. Hendricks, Klaus F. Jørgensen, Jesper Lützen, Stig A. Pedersen, 2007-01-17 The main theme of this anthology is the unique interaction between mathematics physics and philosophy during the beginning of the 20th century In this book ten renowned philosopher historians probe insightfully into key conceptual questions of pre quantum mathematical physics The result is a diverse yet thematically focused compilation of first class papers on mathematics physics and philosophy and a source book on the interaction between them

**Relativity and Geometry**

Roberto Torretti, 1996-01-01 Early in this century it was shown that the new non Newtonian physics known as Einstein's Special Theory of Relativity rested on a new non Euclidean geometry which incorporated time and space into a unified chronogeometric structure This high level study elucidates the motivation and significance of the changes in physical geometry brought about by Einstein in both the first and the second phase of Relativity After a discussion of Newtonian principles and 19th century views on electrodynamics and the aether the author offers illuminating expositions of Einstein's electrodynamics of moving bodies Minkowski spacetime Einstein's quest for a theory of gravity gravitational geometry the concept of simultaneity time and causality and other topics An important Appendix designed to define spacetime curvature considers differentiable manifolds fiber bundles linear connections and useful formulae Relativity continues to be a major focus of interest for physicists mathematicians and philosophers of science This highly regarded work offers them a rich historico critical exposition emphasizing geometrical ideas of the elements of the Special and General Theory of Relativity

**The Laws of Scientific Change** Hakob Barseghyan, 2015-08-17 This book systematically creates a general descriptive theory of scientific change that explains the mechanics of changes in both scientific theories and the methods of their assessment It was once believed that while scientific theories change through time their change itself is governed by a fixed method of science Nowadays we know that there is no such thing as an unchangeable method of science the criteria employed by scientists in theory evaluation also change through time But if that is so how and why do theories and methods change Are there any general laws that govern this process or is the choice of theories and methods completely arbitrary and random Contrary to the widespread opinion the book argues that scientific change is indeed a law governed process and that there can be a general descriptive theory of scientific change It does so by first presenting meta theoretical issues divided into chapters on the scope possibility and assessment of theory of scientific change It then builds a theory about the general laws that govern the process of scientific change and goes into detail about the axioms and theorems of the theory *The*

Domski, Michael Dickson, 2010 Addressing a wide range of topics from Newton to Post Kuhnian philosophy of science these essays critically examine themes that have been central to the influential work of philosopher Michael Friedman Special focus is given to Friedman's revealing study of both history of science and philosophy in his work on Kant Newton Einstein and other major figures This interaction of history and philosophy is the subject of the editors manifesto and serves to both explain and promote the essential ties between two disciplines usually regarded as unrelated *Journey into Philosophy*

Rethinking Scientific Change and Theory Comparison: Léna Soler,H. Sankey,Paul Hoyningen-Huene,2008-05-29 L NA SOLER This volume is a collection of essays devoted to the analysis of scientific change and stability It represents the most recent thinking on the topic of incommensurability and scientific theory change It explores the balance and tension that exists between commensurability and continuity or stabilities on the one hand and incommensurability and discontinuity or ruptures on the other And it discusses some central epistemological consequences regarding the nature of scientific progress rationality and realism With respect to these topics it investigates a number of new avenues and revisits some familiar issues with a focus on the history and philosophy of physics in a way that is informed by developments in cognitive sciences as well as the claims of New experimentalists The essays in this book are fully revised versions of papers which were originally presented at the international colloquium *Repenser l'évaluation comparative des théories scientifiques : stabilité, ruptures, incommensurabilités* organized by Léna Soler and Paul Hoyningen-Huene at the University of Nancy France in June 2004 Each paper is followed by a critical comment which either represents an opposing viewpoint or suggests some developments The conference was a striking example of the sort of genuine dialogue that can take place between philosophers of science historians of science and scientists who come from different traditions and endorse opposing commitments I hope that this is evident in the book too and that it will constitute one of its attractions
