Elderly People Their Medicines And Their Doctors:

Elderly People, Their Medicines, and Their Doctors Ann Cartwright, Christopher Smith, 2024-05-10 In the late 1980s an increasing proportion of all prescribed medicines went to people over 65 years of age not only because they constituted a growing sector of the population but also because their consumption rate unlike that of younger people was increasing This increase was therefore a matter for widespread concern which had until now been largely speculative as no recent national survey had focused on this issue Originally published in 1988 Ann Cartwright and Christopher Smith looked at the medicines prescribed for and taken by a nationally representative sample of elderly people The experiences and views of both patients elderly people and professionals general practitioners are examined and related What is revealed is how much and how little GPs knew about the social circumstances and medicine taking of their elderly patients Evaluation of all the prescribed medicines taken shows the extent of elderly people s knowledge of their medication and identifies duplications potentially harmful interactions contraindications and inappropriate dosages Recommendations for action to be taken by doctors pharmacists medical educators and elderly people themselves made this book essential reading for all those concerned with the health and welfare of elderly people at the time *Alternative Medicine for the Elderly* P. Cherniack, N.

Cherniack, 2013-04-18 The explosion of information about complementary and alternative medicine CAM has demanded the attention of health professionals and responsible consumers including the elderly Increasingly medical schools are providing education about CAM This book brings together for academicians and interested mainstream practitioners much of the current information on CAM and its role in the health of the elderly The individual chapters are thoroughly researched and quite readable even for patients and the lay public concerned with the state of the evidence and art supporting CAM s role in prevention and management of illness and well being This book provides educators with much necessary information needed to prepare coursework and learning activities Although definitive data are lacking regarding efficacy and even safety of CAM methodologies many chapters in this book summarize the existing evidence in a usable way The topics analyzed range from well accepted therapies such as vitamin E for dementia and zinc tablets for the common cold to far less conventional therapies such as transcendental meditation The conclusions are often surprising but well presented and defended Even the most highly controversial areas such as the use of acupuncture to treat low back pain and osteoarthritis of the knee are thoroughly and fairly reviewed Finally the chapters address some of the political issues that challenge CAM These issues include who should be allowed to practice a CAM discipline whose efficacy is not based on the scientific method and some of the state to state variations in practice standards and licensure **Drug abuse treatment** United States. institutional setting for the delivery of medical care inappropriate responses to antagonistic environmental conditions such as crowding and excessive clutter in institutional settings extremes in weather or lack of power and water in a home or field setting cognitive errors of omission and commission precipitated by inadequate information and or situational factors stress fatigue excessive cognitive workload The first to address the subject of human error in medicine this book considers the topic from a problem oriented systems perspective that is human error is considered not as the source of the problem but as a flag indicating that a problem exists The focus is on the identification of the factors within the system in which an error occurs that contribute to the problem of human error As those factors are identified efforts to alleviate them can be instituted and reduce the likelihood of error in medical care Human error occurs in all aspects of human activity and can have particularly grave consequences when it occurs in medicine Nearly everyone at some point in life will be the recipient of medical care and has the possibility of experiencing the consequences of medical error The consideration of human error in medicine is important because of the number of people that are affected the problems incurred by such error and the societal impact of such problems The cost of those consequences to the individuals involved in medical error both in the health care providers concern and the patients emotional and physical pain the cost of care to alleviate the consequences of the error and the cost to society in dollars and in lost personal contributions mandates consideration of ways to reduce the likelihood of human error in medicine The chapters were written by leaders in a variety of fields including psychology medicine engineering cognitive science human factors gerontology and nursing Their experience was gained through actual hands on provision of medical care and or research into factors contributing to error in such care Because of the experience of the chapter authors their systematic consideration of the issues in this book affords the reader an insightful applied approach to human error in medicine an approach fortified by academic discipline Medications and Older People ,2003 **Practical Prehospital Care E-book** Ian Greaves,Keith Porter,Jason Smith,2016-06-07 defines the specialty of pre hospital medicine editors have extensive experience of both military and civilian pre hospital trauma life support Greaves and Porter are well known authors amongst the paramedic market updated resuscitation guidelines now in force throughout Europe updated references modern reader friendly page design incorporating text colour market priced non essential material e g history of emergency medicine removed **Companion Encyclopedia of the History of Medicine** W. adults there is a focus on healthy aging that will benefit the individuals and the wider communities as older adults will be able to support family members and partake in paid or voluntary work for a longer period of time Currently a large number of older adults are unable to work increasing the likelihood of economic instability with fewer streams of income Economic instability has been proven to have health impacts including declining mental wellbeing malnutrition and the inability to afford prescribed medications Social isolation proves to be another important factor in the overall health of older adults The CDC reports that poor social interactions have been linked to a higher risk of developing multiple serious medical conditions
