Electric Power Strategic Issues James L. Plummer, Terry A. Ferrar, William R. Hughes, 1983 **Electric Power and Energy in China** Zhenya Liu, 2013-12-31 The acute energy problems facing China today are characterized by their own histories and realities Some have come about because of China's energy endowment and stage of development while others have been created by a combination of domestic and global factors Some are the results of an accumulation of longstanding contradictions while others are new challenges posed by the new order There are no miracle cures to solve these problems instantly What is needed is a tireless enquiry with goals planning and procedures guided by a clear energy strategy With China's increasing dependence on foreign energy sources and the global energy situation and greenhouse gas issue exerting an increasingly prohibiting effect on China's energy development energy diplomacy has become an important component of Chinese diplomatic affairs Based on a broad energy outlook this book studies and analyzes China's energy issues and energy strategies from the perspective of electric power Discusses a variety of issues including energy transportation and allocation end user consumption markets early warning and emergency technical innovation As a leading player in the power and energy area China's strategies attracts global attention Proposes the innovative idea of Macro Energy Perspective As a key player in China's energy industrial circle the author's perspective can help global audiences to understand China's energy strategies better *Electric Power and Energy in China* is ideal for government energy policy makers engineers scientists and enterprise managers to understand China's strategy in electric power and energy It is also a good reference for energy economics researchers consultants and university students *President's National Energy Policy, Parts 1 & 2* United States. Hirsh, 2003-11-20 This book illuminates the role of technological stagnation in the decline of the American electric utility industry in the late 1960s and 1970s Unlike other interpreters of the industry's woes Professor Hirsh argues that a long and successful history of managing a conventional technology set the stage for the industry's deterioration After improving steadily for decades the technology that brought unequalled productivity growth to the industry appeared to stall in the late 1960s making it impossible to mitigate the economic and regulatory assaults of the 1970s Unfortunately most managers did not recognize or did not want to believe the severity of the technological problems they faced and they chose to focus instead on issues usually financial or public relations that appeared more manageable Partly as a result of this lack of attention to technological issues the industry found itself in the 1980s challenged by the prospects of deregulation and restructuring
