Regulating Utilities with Management Incentives Kurt A. Strasser, Mark Kohler, 1989-12-11 This book proposes a new approach to the government regulation of utilities Arguing that traditional command and control regulation does not encourage efficient performance Strasser and Kohler advocate the use of an incentive based regulatory system and offer a practical realistic strategy for the successful implementation of such plans within the context of utility regulation The analysis is supported by a comprehensive survey of the relevant legal materials an overview of the literature on organization theory and institutional economics and a survey of the latest thinking on how incentives can most effectively be paid Strasser and Kohler begin by identifying problems associated with current regulatory techniques demonstrating that disincentives are often built into the regulatory system When that system has tried incentives the authors show they have been applied in an ad hoc manner further exacerbating the problem In presenting the case for incentive based regulation the authors review the history of comprehensive incentive plans look at what organization theory can teach us about using incentives as a regulatory strategy and explore the effective use of incentive compensation by nonregulated companies Strasser and Kohler then develop a strategy for implementing incentive plans in regulated utilities showing that in order to work the plans must include the installation of clearly defined bonuses and penalties specific standards of performance the payment of bonuses to managers rather than shareholders and reliable and complete measures of company performance Policymakers economists public utility regulators and attorneys involved in the complex arena of utility regulation will find **Regulating Utilities with Management Incentives** indispensable reading
