Electrifying Finland:

Electrifying Europe Vincent Lagendijk, 2025-10-01 Nowadays most consumers are aware of the European dimensions of their electricity supply But what ideas lie behind this European network In constructing electricity networks Europe performed a Janus faced function On the one hand a European network would bolster economic growth and peace On the other economic growth through electrification would increase military potential By combining a wide array of rarely used sources this book unravels how engineers industrialists and policymakers used ideas of Europe to gain support for building a European system By focusing on transnational and European actors this book is a valuable addition to existing national histories of electrification It is an original contribution to the history of technology while also making the role of technology visible in more mainstream European history The empirical chapters show how ideas of European cooperation in general became intertwined with network planning during the Interwar period although the Depression and WWII prevented a European electricity network from being constructed The subsequent chapters describe the influence of the Marshall Plan on European network building focusing on both its economic and military aspects The last chapter portrays how the Iron Curtain was contested The troubled expansion of networks and capacity in Western Europe provided an underpinning for political rapprochement with the East in the 1970s and 1980s Political and economic turmoil after 1989 accelerated this process leading to an interconnected European system by 1995 **Finland's Water-power and Electrification** Georg Christiernin, 1924

Cosmopolitan Commons Cornelis Disco, Eda Kranakis, 2013-06-07 A new approach in commons theory to understand the interactions of technology society and nature supported by case studies of new transnational European commons With the advent of modernity the sharing of resources and infrastructures rapidly expanded beyond local communities into regional national and even transnational space nowhere as visibly as in Europe with its small scale political divisions This volume views these shared resource spaces as the seedbeds of a new generation of technology rich bureaucratic and transnational commons Drawing on the theory of cosmopolitanism which seeks to model the dynamics of an increasingly interdependent world and on the tradition of commons scholarship inspired by the late Elinor Ostrom the book develops a new theory of cosmopolitan commons that provides a framework for merging the study of technology with such issues as risk moral order and sustainability at levels beyond the nation state After laying out the theoretical framework the book presents case studies that explore the empirical nuances airspace as transport commons radio broadcasting hydropower weather forecasting and genetic diversity as information commons transboundary air pollution and two capstone studies of interlinked temporally layered commons one on overlapping commons within the North Sea for freight fishing and fossil fuels and one on commons for transport salmon fishing and clean water in the Rhine Contributors H kon With Andersen Nil Disco Paul N Edwards Arne Kaijser Eda Kranakis Kristiina Korjonen Kuusipuro Tiago Saraiva Nina Wormbs

History of Finland Henrik Meinander, 2020-04-15 Henrik Meinander paints a brisk and bold picture of the history of Finland from integrated part of the Swedish kingdom to autonomous Grand Duchy within the Russian empire gradually transformed and maturing into a conscious nation independent state and skilful adapter of modern technology The main geographical context for his study is the Baltic region and the author links his analysis to structural developments and turning points in European history The book blends politics economy and culture to show how human and natural resources in Finland have been utilized and the impact its cultural heritage and technological innovation have had on its development In a departure from most conventional approaches Meinander gives greater emphasis to recent and contemporary events In other words he puts Finland into a range of historical contexts in its Baltic and European settings to highlight how both together have formed Finland into what it is at the beginning of the twenty first century

Electrifying Finland Timo Myllyntaus, 1991

[A Short History of Finland](#) Fred Singleton, 1998-10 Finland has often been ignored or misunderstood by the English speaking world and this work presents the reader with a readable and authoritative introduction to the life of the Finns and the position of their country in the modern world The book explains how a small nation placed in an unfavorable geopolitical situation won its independence and eventually achieved a high material standard of living together with an enviable degree of social and political stability by adapting itself to the realities of life in an unpromising environment Copyright Libri GmbH All rights reserved

Transforming the Countryside Paul Brassley, Jeremy Burchardt, Karen Sayer, 2016-11-25 It is now almost

impossible to conceive of life in western Europe either in the towns or the countryside without a reliable mains electricity supply By 1938 two thirds of rural dwellings had been connected to a centrally generated supply but the majority of farms in Britain were not linked to the mains until sometime between 1950 and 1970 Given the significance of electricity for modern life the difficulties of supplying it to isolated communities and the parallels with current discussions over the provision of high speed broadband connections it is surprising that until now there has been little academic discussion of this vast and protracted undertaking This book fills that gap It is divided into three parts The first on the progress of electrification explores the timing and extent of electrification in rural England Wales and Scotland the second examines the effects of electrification on rural life and the rural landscape and the third makes comparisons over space and time looking at electrification in Canada and Sweden and comparing electrification with the current problems of rural broadband

Electrifying Finland Timo Millyntaus, 2014-01-14 A case study exploring the effective transfer of electrical technology into Finland a country with a largely agricultural economy The author examines how Finland was able to develop as a result and highlights the main trends characteristic to its rapid economic transformation

Language Electrified Mirko Grimaldi, Elvira Brattico, Yury Shtyrov, 2023-09-04 Language as a system we use to communicate represents the brain's biologically perfected machinery for converting thoughts ideas concepts and reflections of both the outside world and our inner feelings into words and sentences Crucially this process occurs in real time How hundreds of billions of neurons within the dark of the skull control language and speech remains in some respects a mystery To track such neural dynamics in time we need to exploit physiological tools capable of following temporal patterns of neural activity on a fine grain time scale In parallel it is necessary to begin to provide a real interdisciplinary academic background for scholars wishing to embark on this field of study Unlike many similar efforts this book has been conceived as a hands on tool offering the reader the possibility to progressively acquire principles techniques and methods necessary to pursue interdisciplinary research in a fascinating field intersecting linguistic and neuroscience It focuses on neurophysiological methods and applications useful to track the high speed and rapid temporal dynamics of neural activity involved in language and speech The chapters in this book are organized into four parts Part One discusses neural principles and tools for an effective approach to the field of investigation Part Two looks at the issues and perspectives concerned with the use of a range of neurophysiological technologies to investigate the neural computations of language and speech processes Part Three focuses on an in depth exploration of the neural processes associated with the main types of linguistic information ranging from phonemes and prosody to syntax pragmatics and figurative language Lastly Part Five explores the phenomena that goes beyond the segments of basic linguistic units In the Neuromethods series style chapters include the kind of detail and key advice from the specialists needed to get successful results in your laboratory Cutting edge and thorough *Language Electrified Principles Methods and Future Perspectives of Investigation* is a valuable resource that offers the necessary tool box for all researchers

and scientists interested in the challenging field of the neurophysiology of language and speech Electrical Installation Record ,1923 **Electrical Record and Buyer's Reference** ,1922 **Energy and Geopolitics** Per Högselius,2018-10-09

The idea that energy shapes and is shaped by geopolitics is firmly rooted in the popular imagination and not without reason. Very few countries have the means to secure their energy needs through locally available supplies instead enduring dependencies upon other countries have developed. Given energy's strategic significance supply systems for fuels and electricity are now seamlessly interwoven with foreign policy and global politics. Energy and Geopolitics enables students to enhance their understanding and sharpen their analytical skills with respect to the complex relations between energy supply, energy markets and international politics. Per Högselius guides us through the complexities of world energy and international energy relations examining a wide spectrum of fossil fuels alongside nuclear and renewable energies. Uniquely the book also shows how the geopolitics of energy is not merely a matter for the great powers and reveals how actors in the world's smaller nations are as active in their quest for power and control. Encouraging students to apply a number of central concepts and theoretical ideas to different energy sources within a multitude of geographical, political and historical contexts this book will be a vital resource to students and scholars of geopolitics, energy security and international environmental policy and politics.

Travels of Learning Ana Simões, A. Carneiro, M.P. Diogo,2013-04-17 The idea behind this book grew out of a research project launched by the international group STEP: Science and Technology in the European Peripheries established in 1999 by historians of science from Spain, Portugal, Belgium, Greece, Turkey, Italy, Russia, Sweden and Denmark. The aim has been to re-examine the historical and we might also add the geographical character of science and technology and their institutions in regions and societies within Europe usually outside mainstream historical analysis. The intended activities of the group have been framed by the following issues: reconsidering the centre-periphery model which has been the dominant model in studies on the transfer of scientific knowledge; bringing to the fore the concept of scientific appropriation and attempting to study the construction of various local discourses; systematically examining the relationship between science, politics and the rhetoric of modernisation in societies in the European periphery; joining forces to find out more about scientific travels using networks to further understand the dynamics and role of scholars on societies in the periphery of Europe; intensifying efforts to catalogue and

make available to the international community the archival material in the peripheral countries <http://www.cc.uoa.gr/step> on page 2 As a result of these programmatic guidelines a meeting was held in Lisbon in September 2000 in which the topic of scientific travels was used as a particularly good unifying theme on which to base a discussion of case studies involving the European peripheries

The Making of Europe's Critical Infrastructure P. Högselius, A. Hommels, A. Kaijser, E. van der Vleuten, Erik van der Vleuten, 2013-11-26 Europe's critical infrastructure is a key concern to policymakers NGOs companies and citizens today A 2006 power line failure in northern Germany closed lights in Portugal in a matter of seconds Several Russian Ukrainian gas crises shocked politicians entrepreneurs and citizens thousands of kilometers away in Germany France and Italy This book argues that present day infrastructure vulnerabilities resulted from choices of infrastructure builders in the past It inquires which and whose vulnerabilities they perceived negotiated prioritized and inscribed in Europe's critical infrastructure It does not take Europe for granted but actively investigates which countries and peoples were historically connected in joint interdependency and why In short this collection unravels the simultaneous historical shaping of infrastructure common vulnerabilities and Europe
