Energy Research Abstracts ,1984 CAS Cern Accelerator School Radio Frequency Engineering, Seeheim, Germany, 8-16 May 2000 Proceedings European Organization for Nuclear Research, 2005 On the Properties of Novel Superconductors Heshmatollah Yavari, 2020-07-29 Since the discovery of superconductivity a great number of theoretical and experimental efforts have been made to describe this new phase of matter that emerged in many body systems In this regard theoretical models have been presented the most famous of which was the BCS theory that can only describe conventional superconductors With the discovery of new class superconductors the superconducting mechanism became a new challenge in the field of condensed matter physics This unexpected discovery opened a new area in the history of superconductivity and experimental researchers started trying to find new compounds in this class of superconductors These superconductors are often characterized by the anisotropic character in the superconducting gap function with nodes along a certain direction in the momentum space Since the pairing interaction has an important role in the superconducting gap structure its determination is very important to explain the basic pairing mechanism In this regard this book includes valuable theoretical and experimental discussions about the properties of superconductors Here you will find valuable research describing the properties of unconventional superconductors
