Fraissard, H.A. Resing, 2012-12-06 In 1976 on the occasion of the Centennial of the American Chemical Society H A Resing and C G Wade organized an international symposium on magnetic resonance in colloid and interface science which brought together a large number of scientists from the United States and from abroad

The aim of this symposium was to include all experimental inorganic organic and biochemical systems in which molecules are bound to interfaces and to show the contribution of various techniques based on magnetic resonance to the knowledge of these systems. This ambitious program resulted into a very interesting gathering that initiated a more interdisciplinary approach to the problem of interfaces. Because of the success of this symposium it was suggested that a similar meeting should be organized in Europe within the next three years. Professor J. FRAISSARD accepted this task but considering the rapid developments in the theory and in the applications of the magnetic resonance spectroscopies the organizing committee decided to arrange the meeting to be held in MENTON France in two parts: the first being a School and the second the Symposium proper. The former was intended to review and to teach theoretical aspects as well as to discuss the experimental results derived from these advanced methods. The Symposium was to be for the discussion of the latest results at the highest level. *Electron Spin Resonance*, 1992. **Handbook of Applied Solid State Spectroscopy** D.R.

Vij, 2007-02-15 Solid State spectroscopy is a burgeoning field with applications in many branches of science including physics chemistry biosciences surface science and materials science. *Handbook of Applied Solid State Spectroscopy* brings together in one volume information about various spectroscopic techniques that is currently scattered in the literature of these disciplines. This concise yet comprehensive volume covers theory and applications of a broad range of spectroscopies including NMR NQR EPR ESR ENDOR scanning tunneling acoustic resonance FTIR Auger electron emission x-ray photoelectron emission luminescence and optical polarization and more. Emphasis is placed on fundamentals and current methods and procedures together with the latest applications and developments in the field. Radical Ionic Systems Anders Lund, Masaru Shiotani, 2012-12-06 It is now more than 20 years since the book *Radical Ions* edited by Kaiser and Kevan appeared. It contained aspects regarding generation identification spin density determination and reactivity of charged molecules with an odd number of electrons. New classes of reactive ion radicals have been detected and characterised since then, most notably cation radicals of saturated organic compounds. Trapping of electrons has been found to occur not only in frozen glasses but also in organic crystals. The structure and reactions of anion radicals of saturated compounds have been clarified during the last 20 years. We have asked leading experts in the field to write separate chapters about cation radicals anion radicals and trapped electrons as well as more complex systems of biological or technological interest. More attention is paid to recent studies of the ions of saturated compounds than to the older and previously reviewed work on aromatic ions. In the case of trapped electrons full coverage is out of the question and focus is on recent efforts to characterise the solvation structure in ordered and disordered systems. *Handbook of Microwave Technology* T. Koryu Ishii, 1995-10-25 The *Handbook of Microwave Technology* provides a reference resource for professionals in business and industry as well as science and engineering students. A compact concise reference, the Volumes contain focused chapters complete with useful formulas charts graphs tables examples and diagrams that are clearly explained and easily applicable to practical cases.
