*The Ecologist's Guide to France* Mary D. Davis, 1988      Handbook of Road Ecology Rodney van der Ree, Daniel J. Smith, Clara Grilo, 2015-04-02 Winner of the IENE Project Award 2016 This authoritative volume brings together some of the world's leading researchers, academics, practitioners and transportation agency personnel to present the current status of the ecological sustainability of the linear infrastructure primarily road, rail and utility easements that dissect and fragment landscapes globally. It outlines the potential impacts, demonstrates how this infrastructure is being improved and how broad ecological principles are applied to mitigate the impact of road networks on wildlife. Research and monitoring is an important aspect of road ecology encompassing all phases of a transportation project. This book covers research and monitoring to span the entire project continuum starting with planning and design through construction and into maintenance and management. It focuses on impacts and solutions for species groups and specific regions with particular emphasis on the unique challenges facing Asia, South America and Africa. Other key features: Contributions from authors originating from over 25 countries including from all continents. Each chapter summarizes important lessons and includes lists of further reading and thoroughly up-to-date references. Highlights principles that address key points relevant to all phases in all road projects. Explains best practices based on a number of successful international case studies. Chapters are stand-alone but they also build upon and complement each other. Extensive cross-referencing directs the reader to relevant material elsewhere in the book. Handbook of Road Ecology offers a comprehensive summary of approximately 30 years of global efforts to quantify the impacts of roads and traffic and implement effective mitigation. As such, it is essential reading for those involved in the planning, design, assessment and construction of new roads, the management and maintenance of existing roads and the modifying or retrofitting of existing roads and problem locations. This handbook is an accessible resource for both developed and developing countries including government transportation agencies, government environmental conservation agencies, NGOs and road funding and donor organisations.      The nature park guide for Nouragues Nature Reserve (French Guiana), 2025-09-26      **Mauritania Ecology, Nature Protection Laws and Regulations Handbook - Strategic Information and Basic Laws** IBP, Inc., 2017-08-27 2011 Updated Reprint Updated Annually Mauritania Ecology Nature Protection Laws and Regulation Handbook      **The Power Of Politics** Jan Willem Duyvendak, 2019-07-11 In the turbulent years of the 1960s and 1970s France like other European countries and the United States was rocked by a new wave of social movements. The early development of a strong antinuclear movement during the 1970s made France the prototypical country for new social movements NSMs. However in the 1980s these French NSMs experienced a strong decline. In this book Jan Willem Duyvendak compares the surprising development of these NSMs in France for peace, the environment, an end to nuclear technology, solidarity, squatters' rights, women's rights and gay rights to the development of similar campaigns in Germany, Switzerland and the Netherlands. Although all of these countries share more or less the same economic characteristics, they

have different political traditions Duyvendak finds that by the 1980s the new social movements were weaker in France because of France's tradition of old political conflicts He concludes that because France was still beset with political splits between center periphery and urban country as well as religious and class strife the development of French society during the 1980s took place at the expense of these new social movements

Department of Public Instruction,1975 Divided Natures Kerry H Whiteside,2002-02-01 In this book Kerry Whiteside introduces the work of a range of French ecological theorists to an English speaking audience He shows how thinkers in France and in English speaking countries have produced different strains of ecological thought and suggests that the work of French ecological theorists could lessen pervasive tensions in Anglophone ecology Much of the theory written in English is shaped by the debate between anthropocentric ecologists who contend that the value of our nonhuman surroundings derives from their role in fulfilling human interests and ecocentric ecologists who contend that the nonhuman world holds ultimate value in and of itself This debate is almost nonexistent among French theorists who tend to focus on the processes linking nature and human identity Whiteside suggests that the insights of French theorists could help English language theorists to extricate themselves from endless debates over the real center of nature's value Among the French theorists discussed are Denis de Rougemont Denis Duclos Ren Dumont Luc Ferry Andr Gorz Félix Guattari Bruno Latour Alain Lipietz Edgar Morin Serge Moscovici and Michel Serres The English language theorists discussed include John Barry Robyn Eckersley Robert Goodin Tim Hayward Holmes Rolston III and Paul Taylor
