Coupland,1992 Frost Survival of Plants Akira Sakai,Walter Larcher,2012-12-06 Low temperature represents together with drought and salt stress one of the most important environmental constraints limiting the productivity and the distribution of plants on the Earth Winter survival in particular is a highly complex phenomenon with regards to both stress factors and stress responses The danger from winter cold is the result not only of its primary effect i e the formation of ice in plant tissues additional threats are presented by the freezing of water in and on the ground and by the load and duration of the snow cover In recent years a number of books and reviews on the subject of chilling and frost resistance in plants have appeared all of these publications however concentrate principally on the mechanisms of injury and resistance to freezing at the cellular or molecular level We are convinced that analysis of the ultrastructural and biochemical alterations in the cell

and particularly in the plasma membrane during freezing is the key to understanding the limits of frost resistance and the mechanisms of cold acclimation This is undoubtedly the immediate task facing those of us engaged in resistance research It is nevertheless our opinion that in addition to understanding the basic physiological events we should be careful not to overlook the importance of the comparative aspects of the freezing processes the components of stress avoidance and tolerance and the specific levels of resistance

Natural Grasslands R.T. Coupland, 1993-02-01 This volume is concerned with those parts of the earth's surface where semiarid to subhumid climate determines that the potential vegetation is characterized by a more or less continuous layer of grasses and other associated herbs. These grasslands have been modified to a very considerable degree by the activities of man and his domesticated animals. The authors of the various chapters have evaluated the effect of these stresses in modifying ecosystem structure and activities of organisms. The book provides an intensively referenced and indexed synthesis and review of knowledge concerning the natural grasslands of the world in as uniform a style as possible. Because of its length it is published in two parts. The first part deals with the grasslands of the Western Hemisphere and the Eastern Hemisphere and the resumé compose this second volume
