Intelligent Techniques in E-Commerce Zhaohao Sun,Gavin R. Finnie,2013-03-20

E commerce has passed through a number of stages in the minds of most readers of the daily press Initially it was the province of the specialist and considered almost irrelevant to the needs and activities of everyday life companies looking for venture capital in this area had little if any chance of obtaining sufficient funds from the rather conservative investors who provided the only source of start up capital Then came the dot com boom and suddenly e commerce was the most exciting topic possible Venture capital was available from every possible source and almost any company with a com in its name could be assured of instant funding on request This boom was inevitably followed by the dot com bust and the press wamed that the days of e commerce were gone perhaps never to return This apparently confusing stages of growth model is in reality nothing of the sort E commerce is simply the logical outcome of combining computers with tele communications networks The astonishing changes which a global economy has brought with it are reflected in the changes to the way we do business which are increasingly synonymous with e commerce Indeed the term e commerce itself is coming to mean only the transaction based component of e business any process that a business organisation conducts over a computer mediated network as Thomas Mesenbourg of the U S Census Bureau said in 1999
