It presents the story on the back of dual intertwined cornerstone pillars. The initial agenda sets the global macroeconomic context and its interplay with financial markets and sub segment capital markets. Then the book moves to the evolvement of the inherent capital markets from nascence to present day and through profiling of the current operating surroundings. The latter pillar performs empirical research built upon Eugene Fama's weak form efficiency theorem with statistical testing results further framing the comprehensive findings on five selected southeast European developing capital markets. Jointly the two parts present the first such well documented capital markets set up complemented by wide ranging empirical findings of inefficiency. The book introduces at first the global perspective in which the growing globalization in the past decades has led to improved efficiencies to faster innovation and to greater systemic connectedness and meaningfully so by an increasing contribution from transitioning economies. Nevertheless in higher systemic concentration there is an implied higher volatility risk and evidence has revealed dichotomous reaction through divergence in impact between the developed and the developing economies. The capital markets industry is at the forefront of financial innovation and many aspects in its function and power are a determining factor in wider socio economic progress. The findings uncover details of market structure and role and with that this work creates significant new knowledge on the industry and will be of particular interest to investors taxpayers academics researchers and policy makers of capital markets.

*Alternative Beta Strategies and Hedge Fund Replication* Lars Jaeger, Jeffrey Pease, 2008-10-13 There's a buzzword that has quickly captured the imagination of product providers and investors alike hedge fund replication. In the broadest sense replicating hedge fund strategies means replicating their return sources and corresponding risk exposures. However there still lacks a coherent picture on what hedge fund replication means in practice what its premises are how to distinguish different approaches and where this can lead us to. Serving as a handbook for replicating the returns of hedge funds at considerably lower cost *Alternative Beta Strategies and Hedge Fund Replication* provides a unique focus on replication explaining along the way the return sources of hedge funds and their systematic risks that make replication possible. It explains the background to the new discussion on hedge fund replication and how to derive the returns of many hedge fund strategies at much lower cost it differentiates the various underlying approaches and explains how hedge fund replication can improve your own investment process into hedge funds. Written by the well known Hedge Fund expert and author Lars Jaeger the book is divided into three sections Hedge Fund Background Return Sources and Replication Techniques. Section one provides a short course in what hedge funds actually are and how they operate arming the reader with the background knowledge required for the rest of the book. Section two illuminates the sources from which hedge funds derive their returns and shows that the majority of hedge fund returns derive from systematic risk exposure rather than manager Alpha. Section three presents various approaches to replicating hedge fund returns by presenting the first and second generation of hedge

fund replication products points out the pitfalls and strengths of the various approaches and illustrates the mathematical concepts that underlie them With hedge fund replication going mainstream this book provides clear guidance on the topic to maximise returns
