The Economic Effects of Airline Deregulation Steven Morrison, Clifford Winston, 2010-12-01 In 1938 the U S Government took under its wing an infant airline industry Government agencies assumed responsibility not only for airline safety but for setting fares and determining how individual markets would be served Forty years later the Airline Deregulation Act of 1978 set in motion the economic deregulation of the industry and opened it to market competition This study by Steven Morrison and Clifford Winston analyzes the effects of deregulation on both travelers and the airline industry The authors find that lower fares and better service have netted travelers some 6 billion in annual benefits while airline earnings have increased by 2.5 billion a year Morrison and Winston expect still greater benefits once the industry has had time to adjust its capital structure to the unregulated marketplace and they recommend specific public policies to ensure healthy competition

Effects of Deregulation in the Aviation Industry Barbara Bilyk, 2009-11 Seminar paper from the year 2009 in the subject Politics International Politics Environmental Policy grade Distinction Swinburne University of Technology Melbourne course Aviation Regulation Environment and Operation language English abstract Starting in the USA where deregulation of air transportation began in the late seventies this trend was observable throughout Europe in the eighties and Australia at the beginning of the nineties The major arguments for liberalisation were in general a reduction of capacity constraints and a simplified market access Himpel Lipp 2006 p 26 Constitutional for these ideas is the theory of contestable markets which assumes the efficiency of competition with a free market entry and market exit Therefore deregulation processes aim at providing a better safer and more efficient industry However Geoffrey Thomas 2008 among others points out that in reality the liberalisation of air transportation has caused predominantly negative

outcomes which is why there should be a return to some degree of regulation Based on Thomas train of thoughts this research paper is aimed at critically evaluating the effects of liberalisation both on the aviation industry and on the consumer The paper is therefore structured as follows after revealing the limitations of the evaluation positive effects of liberalisation in Europe the United States and Australia are outlined which are then opposed to negative effects Based on these findings a conclusion is finally drawn *Airline Deregulation and Laissez-Faire Mythology* Paul S. Dempsey, Andrew R.

Goetz, 1992-09-08 Airline deregulation is a failure conclude Professors Dempsey and Goetz They assault the conventional wisdom in this provocative book finding that the Airline Deregulation Act of 1978 championed by a profound political movement which also advocated the deregulation of the bus trucking rail and pipeline industries failed to achieve the promises of its proponents Only now is the full impact of deregulation being felt Airline deregulation has resulted in unprecedented industry concentration miserable service a deterioration in labor management relations a narrower margin of safety and higher prices for the consumer This comprehensive book begins by exploring the strategy tactics and egos of the major airline robber barons including Frank Lorenzo and Carl Icahn In separate chapters the strengths weaknesses and corporate cultures of each of the major airlines are evaluated Part Two assesses the political economic and social justifications for New Deal regulation of aviation and its deregulation in the late 1970s Part Three then addresses the major consequences of deregulation in chapters on concentration pricing service and safety and Part Four advances a legislative agenda for solving the problems that have emerged Professors Dempsey and Goetz advocate a middle course of responsible government supervision between the dead hand of regulation of the 1930s and the contemporary evil of market Darwinism The book will be of particular interest to airline and airport industry executives government officials and students and scholars in public policy economics business political science and transportation *Airline Deregulation* California.

Reynolds-Feighan, 2012-12-06 1 1 A Brief History of U S Commercial Aviation Regulation and Deregulation The U S commercial aviation industry was regulated by the government for a period of 40 years beginning in 1938 with the passing of the Federal Aviation Act and ending in October 1978 when President Carter signed into law the Airline Deregulation Act ADA There were 16 airlines in existence when the Federal Aviation Act was passed in 1938 the so called trunk lines The Act established the Civil Aeronautics Authority CAA as the industry s regulatory body The Act was passed principally because it was felt that the free market if allowed to continue unregulated for much longer would put many of these firms into bankruptcy It is possible therefore to view the CAA of 1938 re organized into the Civil Aeronautics Board CAB in 1940 as a response to a potential market failure at the time In the 1930s few air traffic markets could have efficiently supported more than one airline operating in the market Panzar 1980 Competition among the carriers was cut throat and it was felt that the near bankruptcy of the airlines in the period was caused principally by the competitive bidding system used by the Post

**Deregulating the Airlines** Elizabeth E. Bailey, David R. Graham, Daniel P. Kaplan, 1983 *The Airline Industry and the Impact of Deregulation* George Williams, 2017-03-02 In the fast changing theatre of air transportation the strategic development of airlines and the operating economics of scheduled airline services have been transformed following the profound impact of US deregulation The lessons gleaned from the US experience including effective ways of constraining rivals have quickly been adopted by carriers facing the opening up to competition of their own local markets In addition in response to the hunt by the successful US survivors for further international traffic carriers have been forced to emulate certain tactics adopted by these megacarriers virtually irrespective of their own government's regulatory stance The economics of the sector particularly with regard to revenue generation has resulted in increased market concentration In the longer term prospects for competition remain unclear given the likely existence of only a small number of similarly endowed globally aligned megacarriers This book explores the impact of deregulation policies on key areas of the airline industry analyzes the response of incumbent carriers to economic freedom and examines whether or not it is possible to devise a pro competitive regulatory strategy for this sector The author provides the reader with a clear explanation as to why airline deregulation policies have produced a number of unanticipated outcomes why low cost new entrants have been unable to survive under deregulation why the impact of airline deregulation has differed between the USA and Western Europe Using this analysis as a basis he explores the future development of the sector indicating the likely future trends towards globalization He also argues that a competitive marketplace is not a guaranteed outcome of full deregulation and suggests an alternative approach The book is of special interest to those members engaged in the airline industry regulatory authorities and government departments of transport and industry It will

**The Economic Effects of Air Transport Market Liberalisation** Eyden Samunderu, 2024-09-19 This book rigorously examines the air transport market liberalisation process on the African continent and presents key highlights challenges and impediments to embracing an open skies market environment in Africa It focuses on the economic impact of air transport liberalisation policy constraints challenges of harmonisation and regional economic integration and its impact on air transport development employing a quantitative assessment based on the Air Transport Liberalisation Index ALI to evaluate how an open skies policy would change the competitive dynamics of air transport in Africa Adopting a two tier gravity model the book explores how demand and route networks would be impacted by the deregulation of the air transport market The book also applies a historical perspective by evaluating the initial ratification of the Yamoussoukro Declaration 1999 which

acted as a catalyst for Africa's 2063 regional agenda focused on establishing the Single African Air Transport Market SAATM. The book also provides a comprehensive analysis of the African Continental Free Trade Area AfCFTA exploring its multifaceted impacts on Africa's single market from economic, regulatory, and sustainability perspectives. This includes an introduction to the AfCFTA highlighting its inception as a major step towards continental economic integration aimed at enhancing intra-African trade, promoting sustainable development, and fostering industrial diversification. It then examines the capacity and competency building of African aviation personnel. Training gaps and skills are extensively evaluated to ensure that the African region is prepared for the new competitive equilibrium post SAATM. The book also raises critical questions regarding the status of the African air transport market. Firstly, with the introduction of an open skies policy in Africa, will the national flag carriers be able to compete under the new market dynamics? Will the SAATM become a game changer in paving the way for the privatisation of some of Africa's poor performing airlines? Will the SAATM create a competitive market and a shift in airfares? How will policymakers deal with the excessive aviation taxes, fees, and charges that make airfares in Africa the highest in the world? What will the economic benefits be for signatory states that embrace the SAATM? Will there be a significant growth trajectory in terms of air travel demand? This book is intended for researchers studying air transport economics in developing markets, graduate students with a primary focus on air transport development, senior policymakers and professionals at governmental agencies, and industry practitioners who want to expand their understanding of the dynamics shaping Africa's air transport landscape.
