Economic Growth And International Trade:

International Trade and Economic Growth Hendrik Van den Berg, Joshua J. Lewer, 2007 Unlike any other text on international trade this groundbreaking book focuses on the dynamic long run relationship between trade and economic growth rather than the static short run relationship between trade and economic efficiency The authors begin with well known theory on international trade and then take the student into more recent and less well known work all with a careful balance between empirical and theoretical perspectives A valuable teaching tool for courses in international economics economic growth and economic development at both the undergraduate and graduate levels the book uses some very modest algebra calculus and statistics However most analytical discussions are built around diagrams in order to make the text accessible to students with a variety of social science backgrounds Instructor s Material are available online to professors who adopt the text

International Trade and Economic Growth in Open Economies John Berdell, 2002 In this enlightening book John Berdell addresses the widely held belief that classical economics distanced itself from policy issues and public debates regarding the effects of international trade on economic growth in advanced economies He argues through a detailed consideration of the evolution and structure of Hume s Smith s Ricardo s and Malthus analyses that it is not only contemporary international economic theory which takes account of these issues Berdell uses a series of non linear dynamic models to illustrate and analyse important aspects of each author s discussion of the interactions between trade and growth The findings are then extended to create a comparison of the classical models with recent empirical research in this area Berdell suggests that John Stuart Mill s plan to synthesise and extend Hume s Smith s and Ricardo s analysis of commercial society was rendered intractable by the limitations of Hume s associationalist psychology This work will be of great interest to both historians of economic ideas and economists concerned with modelling the interactions between growth and international trade

Dynamics in Economic Growth and International Trade Bernhard Felderer, Bjarne S. Jensen, 2003

The Growth of the International Economy, 1820-1960 A. G. Kenwood, A. L. Loughheed, 1971-06-30 Here is an introduction to the study of the international economy as a mechanism for diffusing modern economic growth between nations It is divided into three parts of which the first examines the workings of the system in the years before 1914 This includes an analysis of the conditions favorable to the growth of international economic relations during the period examines the changing character of the international flows of labor capital and trade and surveys contemporary commercial and international monetary policies This first part concludes with a chapter analyzing the international economy as a mechanism for diffusing economic growth and another chapter examining the nature of the economic trends and fluctuations associated with this phase in the growth of the international economic system The second

part gives an account of the collapse of the international economy during the interwar years and traces the causes of collapse to changes in the structure and functioning of the system brought about by World War I and the depression of the 1930s The final part takes the story beyond World War II It describes the wartime and post war efforts to reconstruct the international economic system and examines the working of the new system in the period after 1945 bringing out both its strengths and its weaknesses

Trade and Economic Growth Julia Martins, 2011-06-28 Bachelor Thesis from the year 2010 in the subject Economics Foreign Trade Theory Trade Policy grade 1.0 Vienna University of Economics and Business Institut für Außenwirtschaft und Entwicklung language English abstract The following paper relates two of the most important economic phenomena namely economic growth and international trade Before analysing the relationship between two economic phenomena in detail an overview of some of the most prominent empirical studies concerning the relationship between openness to international trade and economic growth in general is provided As most of them seem to have reached the conclusion that trade influences growth in a positive way the question for the reasons of this presumably positive relationship arises Factors which cause or influence economic growth in general as well as various channels through which trade might have an influence on growth are presented in the third and fourth section The importance of various sources of economic growth and the Solow Model and the AK Model are introduced in order to distinguish between long run and short run effects of capital accumulation learning by doing and R D on economic growth The remaining analysis concentrates on one channel in particular namely on how trade determines a country s import and export structure The importance of the range of products a country produces is enormous and affects economic growth and welfare The fifth section introduces the static Ricardian model of comparative advantage in order to show how productivity levels dictate the

patterns of trade and determine which products a country produces depending on static productivity levels at the time a country opens up to trade Since productivity levels do however not remain constant but are influenced by learning by doing and specialisation dynamic effects of specialisation on comparative advantage should not be neglected For this purpose a model of dynamic comparative advantage is introduced in the sixth section It shows how comparative advantages which exist at the time an economy opens up to trade tend to lock in and determine trade patterns in the long run The question is raised when an economy should open up to trade and a justification of the infant industry argument is provided on theoretical grounds The paper is concluded by a welfare analysis which tries to answer the question under which conditions free trade or protectionist policies are best suited for a country

International Trade, Distortions and Long-Run Economic Growth Jong-Wha Lee, 1992-11-01 The links between trade and growth are examined in a neoclassical model of an open economy in which domestic production requires both domestic and imported inputs The model shows that trade distortions induced by such government policies as tariffs and exchange controls generate cross country divergences in growth rates and in per capita income over a long transitional period The empirical results confirm that tariff rates and black market premia interacting with an estimate of the share of free trade imports have significant negative effects on the growth rate of per capita income across countries in the orders of magnitude predicted by the model

The Impact of International Trade and FDI on Economic Growth and Technological Change Patricia Hofmann, 2013-03-14 Economic globalisation and technological change are the two issues that concerned people in the past concern them today and will

concern them in the future all over the world poor or rich Traditionally questions about allocative effects are asked What are the labour market implications Who loses Who wins What is the net aggregate welfare effect after an adjustment period However two points are rarely taken into consideration How do globalisation and technological change interact and what are the potential long run implications for economic growth This book addresses the interplay of these megatrends It asks how economic globalisation may affect innovation and technology of individual firms and eventually the growth prospects of countries Thereby it shows that protectionism not only harms static efficiency but might as well lead to dynamic losses The book provides a systematic overview of the theoretical underpinnings of the openness growth nexus and summarises the conceptual problems and important findings of the empirical analyses so far The theoretical insights are supported by two empirical studies the first dealing with the innovative behaviour and the within multinational technology transfer of Spanish firms that were acquired by foreign companies and the second analysing productivity growth rate implications from exporting for German manufacturing firms
