**Resource Abundance and Economic Development** R. M. Auty,2001-06-28 Since the 1960s the per capita incomes of the resource poor countries have grown significantly faster than those of the resource abundant countries In fact in recent years economic growth has been inversely proportional to the share of natural resource rents in GDP so that the small mineral driven economies have performed least well and the oil driven economies worst of all Yet the mineral driven resource rich economies have high growth potential because the mineral exports boost their capacity to invest and to import Resource Abundance and Economic Development explains the disappointing performance of resource abundant countries by extending the growth accounting framework to include natural and social capital The resulting synthesis identifies two contrasting development trajectories the competitive industrialization of the resource poor countries and the staple trap of many resource abundant countries The resource poor countries are less prone to policy failure than the resource abundant countries because social pressures force the political state to align its interests with the majority poor and follow relatively prudent policies Resource abundant countries are more likely to engender political states in which vested interests vie to capture resource surpluses rents at the expense of policy coherence A longer dependence on primary product exports also delays industrialization heightens income inequality and retards skill accumulation Fears of Dutch disease encourage efforts to force industrialization through trade policy to protect infant industry The resulting slow maturing manufacturing sector demands transfers from the primary sector that outstrip the natural resource rents and sap the competitiveness of the economy The chapters in this collection draw upon historical analysis and models to show that a growth collapse is not the inevitable outcome of resource abundance and that policy counts Malaysia a rare example of successful resource abundant development is contrasted with Ghana Bolivia Saudi Arabia Mexico and Argentina which all experienced a growth collapse The book also explores policies for reviving collapsed economies with reference to Costa Rica South Africa Russia and Central Asia It demonstrates the importance of initial conditions to successful economic reform

into the global economy from 1973 to 2015 Three key explanatory variables are considered the evolution of business state relations US geopolitical interest in the region through the waves of trade agreements and the political impact of the dynamics of inflows and outflows of financial capital Although Chile is typically considered to be a successful case of a free market economy this book presents an alternative narrative of Chile s growth through using a Latin American Structuralist political economy perspective While it recognises the positive results in terms of growth it also emphasises the lack of dynamic sources for long term development which embeds the economy into short term booms followed by periods of stagnation

**New Technologies and Work** Arthur Francis,Peter Grootings,2018-03-26 Originally published in 1989 this book is a valuable contribution to the development of a non technological approach in the study of technology and work The studies compare the introduction and implementation of new technology at work in similar enterprises throughout Europe The contributors share the basic assumption that the impact of technology varies greatly according to the characteristics of the country and its socioeconomic system They view changes in work as the result of the complex combinations and interactions of such conditions and technology rather than of technology per se and their focus is therefore on the mechanisms and processes which come into play when new technology is being introduced The book s international scope makes it a rich empirical source of comparative material     **Technological Transformation in the Third World: Volume 4** Surendra J. Patel,2018-04-09 Originally published in 1993 this book contains 3 studies from Finland Greece and Japan These countries were chosen because they experienced their technological transformation mainly during the 20th Century and it was considered that their experience would have some relevant lessons for the countries of the third world Special attention is paid to Japan as its example has great relevance both for development theory and practical strategies     *Regional Development Strategies* Jeremy Alden,Philip Boland,2013-10-18 Regional development strategies have become the focus of attention in many countries in the 1990s This textbook provides a conceptual theoretical and empirical analysis of regional development strategies within a European context It examines the various regional development strategies which are currently being pursued within the regions of Europe defined in its loosest term to include East and West The book describes how many different European regions are attempting to reduce regional disparities by engaging themselves in coherent and focused regional development strategies and there is also private sector approach to regional economic development There are many case studies from Europe and from other parts of the world including Japan thereby providing lessons that different countries and regions can learn form each other
