**The Economics of Climate Change and the Change of Climate in Economics** Kevin Maréchal, 2013-05-02 Climate change is without question the single most important issue the world faces over the next hundred years The most recent scientific data have led to the conclusion that the globally averaged net effect of human activities since 1750 has been one of warming and that continued greenhouse gas emissions at or above current rates would cause this process to continue to the severe detriment of our environment This unequivocal link between climate change and human activity requires an urgent world wide shift towards a low carbon economy and coordinated policies and measures to manage this transition The starting point and core idea of this book is the long held observation that the threat of climate change calls for a change of climate in economics Inherent characteristics of the climate problem including complexity irreversibility and deep uncertainty challenge core economic assumptions and mainstream economic theory appears inappropriately equipped to deal with this crucial issue Kevin Maréchal shows how themes and approaches from evolutionary and ecological economics can be united to provide a theoretical framework that is better suited to tackle the problem

*Can We Afford the Future?* Frank Ackerman, 2009-04-15 According to many scientists climate change is a growing threat to life as we know it requiring a large scale immediate response According to many economists climate change is a moderately important problem the best policy is a slow gradual start to avoid spending too much They can't both be right In this book Frank Ackerman offers a refreshing look at the economics of climate change explaining how the arbitrary assumptions of conventional theories get in the way of understanding this urgent problem The benefits of climate protection are vital but priceless and hence often devalued in cost benefit calculations Preparation for the most predictable outcomes of global warming is less important than protection against the growing risk of catastrophic change massive investment in new low carbon technologies and industries should be thought of as life insurance for the planet Ackerman makes an impassioned plea to construct a better economics arguing that the solutions are affordable and the alternative is unthinkable If we can't afford the future what are we saving our money for *Can we Afford the Future* is part of The New Economics series which uses the ideas behind a new more human economics to provide a fresh way of looking at major contemporary issues

*The Economics of Climate Change in China* Fan Gang, Nicholas Stern, Ottmar Edenhofer, Xu Shanda, Klas Eklund, Frank Ackerman, Lailai Li, Karl Hallding, 2013-09-13 China faces many modernization challenges but perhaps none is more pressing than that posed by climate change China must find a new economic growth model that is simultaneously environmentally sustainable can free it from its dependency on fossil fuels and lift living standards for the majority of its population But what does such a model look like And how can China best make the transition from its present macro economic structure to a low carbon future This ground breaking economic study led by the Stockholm Environment Institute and the Chinese Economists 50 Forum brings together leading international thinkers in economics climate change and development to tackle some of the most challenging issues relating to China's low carbon development This study maps out a deep carbon reduction scenario and analyzes economic policies that shift carbon

use and shows how China can take strong and decisive action to make deep reductions in carbon emission over the next forty years while maintaining high economic growth and minimizing adverse effects of a low carbon transition Moreover these reductions can be achieved within the finite global carbon budget for greenhouse gas emissions as determined by the hard constraints of climate science The authors make the compelling case that a transition to a low carbon economy is an essential part of China s development and modernization Such a transformation would also present opportunities for China to improve its energy security and move its economy higher up the international value chain They argue that even in these difficult economic times climate change action may present more opportunities than costs Such a transformation for China and the rest of the world will not be easy But it is possible necessary and worthwhile to pursue *Climate Change and Economics* S.
