Ecophysiology Of Tropical Crops:

Ecophysiology of Tropical Crops Paulo de T. Alvim, T. T. Kozlowski, 2013-09-17 *Ecophysiology of Tropical Crops* covers the knowledge and opinion on ecophysiology of the major tropical crop plants. The book discusses the fundamental ideas about the numerical description of plant development and considers effects of climatic factors e.g. temperature, light and water on physiological processes in plants. The text also presents an overview of the physical and chemical characteristics of tropical soils. The ecophysiology of the major crop plants, particularly those suitable for the wet tropics including rice, sugarcane, pineapple, grasslands, root crops, sweet potato, coffee, cacao, rubber, banana, tea, oil palm, coconut, palm, citrus, cashew and mango, is also considered. Plant ecologists, plant physiologists, biochemists, horticulturists, agronomists, meteorologists, soil scientists, food technologists, plant breeders and people interested in the production of tropical crops will find the book invaluable.

Ecophysiology of Tropical Tree Crops Fabio Dematta, 2010. Plant physiological research has a fundamental role in advancing our understanding of plants and their interactions with surrounding environments. As occurs with most tropical plant species, the gaps in our knowledge of the ecophysiology of tropical tree crops are incommensurable, though significant advances have occurred in recent years. This book highlights these recent advances which could provide valuable information to manage crop plants for maximum productivity. Major tropical tree crops considered here in a broader sense as including species such as banana, cassava, citrus, cocoa, coconut, coffee, mango, oil palm, papaya, rubber and tea are examined. For most of these crops, photosynthesis is treated as a central process affecting crop growth and performance. Crop physiological responses to environmental factors such as light and water availability and temperature are highlighted. The flowering control and fruit growth of crops such as citrus, coffee and mango are explored. In addition, several gaps in our database concerning the ecophysiology of tropical tree crops and areas for further research are indicated.

Ecophysiology of Tropical Crops, 1975 *Physiological Ecology of Tropical Plants* Ulrich Lüttge, 2013-03-09. This richly illustrated text covers the ecophysiology of plants of all major tropical ecosystems from tropical rain forests, epiphytic habitats, mangroves and savannas to salinas, inselbergs and paramos and their ecophysiological adaptation to these different tropical environments. The physiognomy of biotopes and characteristic life forms of plants are depicted with photographs.
