Ecosystem Modeling In Theory And Practice An Introduction With Case Histories:

Ecosystem Modeling in Theory and Practice Charles A. S. Hall, John W. Day, 1990 **Sea Grant Publications Index**, 1977 **Ecotoxicology in Theory and Practice** T.L. Forbes, 1993-11-30 Second in our Ecotoxicology series this book presents a timely discussion of theoretical and practical issues involved in the study of ecotoxicology By concentrating on the key issues the book provides an exciting introduction for those new to ecotoxicology while stimulating veterans in the field into lively debate **Individual-based Modeling and Ecology** Volker Grimm, Steven F. Railsback, 2013-11-28 Individual based models are an exciting and widely used new tool for ecology These computational models allow scientists to explore the mechanisms through which population and ecosystem ecology arises from how individuals interact with each other and their environment This book provides the first in depth treatment of individual based modeling and its use to develop theoretical understanding of how ecological systems work an approach the authors call individual based ecology Grimm and Railsback start with a general primer on modeling how to design models that are as simple as possible while still allowing specific problems to be solved and how to move efficiently through a cycle of pattern oriented model design implementation and analysis Next they address the problems of theory and conceptual framework for individual based ecology What is theory That is how do we develop reusable models of how system dynamics arise from characteristics of individuals What conceptual framework do we use when the classical differential equation framework no longer applies An extensive review illustrates the ecological problems that have been addressed with individual based models The authors then identify how the mechanics of building and using individual based models differ from those of traditional science and provide guidance on formulating programming and analyzing models This book will be helpful to ecologists interested in modeling and to other scientists interested in agent based modeling General Technical Report RM., 1983 **Analysis of Multiresource Production for National Assessments and Appraisals** L. A. Joyce, 1983 **A Blue Carbon Primer** Lisamarie Windham-Myers, Stephen Crooks, Tiffany G. Troxler, 2018-11-16 Key features Captures the historic context and recent developments in science and policy arenas that address the potential for coastal wetlands to be considered as significant contributors to carbon sequestration Links multiple levels of science biogeochemistry geomorphology paleoclimate etc with blue carbon concepts science policy mapping operationalization economics in a single compendium Concludes with a discussion of future directions which covers integrated scientific approaches impending threats and specific gaps in current knowledge Includes 7 case studies from across the globe that demonstrate the benefits and challenges of blue carbon accounting Written by over 100 leading global blue carbon experts in science and policy Blue Carbon has emerged as a term that represents the distinctive carbon stocks and fluxes into or out of coastal wetlands such as marshes mangroves and seagrasses The Blue Carbon concept has rapidly developed in science literature and is highly relevant politically as nations and markets are developing blue carbon monitoring and management tools and policies This book is a comprehensive and current

compendium of the state of the science the state of maps and mapping protocols and the state of policy incentives including economic valuation of blue carbon with additional sections on operationalizing blue carbon projects and 7 case studies with global relevance

Long-Term Forest Dynamics of the Temperate Zone Paul A. Delcourt, Hazel R. Delcourt, 2012-12-06

The synthesis presented in this volume is a direct outgrowth of our ten year FORMAP Project Forest Mapping Across Eastern North America from 20 000 yr B P to the Present Many previous research efforts in paleoecology have used plant fossil evidence as proxy information for primarily geologic or climatic reconstructions or as a bio stratigraphic basis for correlation of regional events In contrast in this book we deal with ecological questions that require a holistic perspective that integrates the interactions of biota with their dynamically changing environments over time scales up to tens of thousands of years In the FORMAP Project our major research objective has been to use late Quaternary plant ecological data sets to evaluate long term patterns and processes in forest development In order to accomplish this objective we have prepared subcontinent scale calibrations that quantitatively relate the production and dispersal of arboreal pollen to dominance in the vegetation for the major tree types of eastern North America Quantification of pollen vegetation relationships provides a basis for developing quantitative plant ecological data sets that allow further ecological analysis of both individual taxa and forest communities through time Application of these calibrations to fossil pollen records for interpreting forest history thus represents a fundamental step beyond traditional summaries based upon pollen percentages

Modeling Disease Transmission and Its Prevention by Disinfection Christon J. Hurst, 1996-11-13

Pathogenic microorganisms exploit a number of different routes for transmission and this book demonstrates how the spread of disease can be prevented through the practices of disinfection and controlling microbial growth The book is organized into four sections

Geochemical Rate Models J. Donald Rimstidt, 2014

This well organised comprehensive reference and textbook describes rate models developed from fundamental kinetic theory and presents models using consistent terminology and notation Major topics include rate equations reactor theory transition state theory surface reactivity advective and diffusive transport aggregation kinetics nucleation kinetics and solid solid transformation rates The theoretical basis and mathematical derivation of each model is

presented in detail and illustrated with worked examples from real world applications to geochemical problems The book is also supported by online resources self study problems put students new learning into practice and spreadsheets provide the full data used in figures and examples enabling students to manipulate the data for themselves This is an ideal overview for graduate students providing a solid understanding of geochemical kinetics It will also provide researchers and professional geochemists with a valuable reference for solving scientific and engineering problems *Integrated Coastal Zone Management of Coral Reefs* Kent Gustavson, Richard M. Huber, H. Jack Ruitenbeek, 2000 The applied research indicates that to improve awareness park education programs should be targeted specifically to the user groups primarily through outreach programs Further the Park s management programs should be highlighted particularly the beneficial tangible products and services benefits the Park provides to each user group The closer the tie between reef conditions and business earnings the greater the users support for reef conservation Coral reefs are sometimes referred to as canaries of the sea because of their early warning ability to show near shore oceanic stress Because of their biological diversity they are also called rainforests of the sea Coral reefs are vital to the well being of millions of people Coral reef managers and government officials trying to save their valuable national resources have turned to research on coral reefs for help The research presented in this publication merits a great deal of notice because the output is useful for decision support and training tools in integrated coastal zone management ICZM The work on cost effectiveness analysis has developed integrated economic and ecological models relying extensively on fuzzy logic procedures to model impacts and effects of interventions within the reef environment By contrast the marine system valuation work provides economic valuations of coral reefs demonstrating the use of different modeling methods and treating key policy issues within this context This publication will interest coastal zone experts and managers worldwide **Handbook of Applied System Science** Zachary P. Neal, 2016-11-25 The Handbook of Applied System Science is organized around both methodological approaches in systems science and the substantive topic to which these approaches have been applied The volume begins with an essay that introduces three system science methods agent based modeling system dynamics and network analysis The remainder of the volume is organized around three broad topics 1 health and human development 2 environment and sustainability and 3 communities and social change Each part begins with a brief introductory essay and includes nine chapters that demonstrate the application of system science methods to address research questions in these areas This handbook will be useful for work in Public Health Sociology Criminal Justice Social Work Political Science Environmental Studies Urban Studies and Psychology *Sources and Methods of Historical Demography* J. Dennis Willigan, Katherine A. Lynch, 2013-10-22 Sources and Methods of Historical Demography covers the fundamental sources methods and approaches to explanatory modeling for describing analyzing and understanding demographic features of past societies The book discusses the intellectual ancestry of historical demographic research beginning in the 17th century as well as the logic of basic techniques for reconstructing and analyzing information

from fundamental source materials The text also describes the full range of disciplines that have made major contributions to historical demography and examples of empirical research The book concludes by arguing the case for conducting historical demographic research with a broad interdisciplinary ideal in mind Historians and sociologists will find the book invaluable
