Hughes,2013-08-02 As environmental problems become increasingly complex it is critical that students and activists learn the skills with which to address them Although there already are many case studies of actual issues only in the last few years have environmental scientists paid close attention to their resolution *Environmental Problem Solving* teaches these skills Jeffrey W Hughes creates an organized method for approaching problems understanding larger issues and crafting solutions to a wide range of contemporary environmental issues Many environmental activists often have preconceived ideas of environmental protection and problem solving They react emotionally to news of deforestation a new housing development or a planned big box store without thinking about the problem logically and they may automatically regard foresters development companies and corporations as opponents As their views harden discourse turns acrimonious and it becomes ever more difficult to find satisfactory solutions This book teaches those on both sides of the table to address their own preconceptions and approach hard issues critically methodically and fairly Hughes combines aspects of the decision making process from the fields of business management and communication science based on extensive research and ample practical experience in the field and classroom He creates a logical framework to help guide thinking from identifying a problem to finding its solution Using examples drawn from real life situations *Environmental Problem Solving* will become an invaluable guide for environmentalists agency professionals consultants students naturalists and concerned citizens [Handbook on Sustainability Transition and Sustainable Peace](#) Hans Günter Brauch,Ürsula Oswald Spring,John Grin,Jürgen

Downton, 2008-11-19 From 2008 for the first time in human history half of the world's population now live in cities Yet despite a wealth of literature on green architecture and planning there is to date no single book which draws together theory from the full range of disciplines from architecture planning and ecology which we must come to grips with if we are to design future cities which are genuinely sustainable Paul Downton's Ecopolis takes a major step along this path It highlights the urgent need to understand the role of cities as both agents of change and means of survival at a time when climate change has finally grabbed world attention and it provides a framework for designing cities that integrates knowledge both academic and practical from a range of relevant disciplines Identifying key theorists practitioners places and philosophies the book provides a solid theoretical context which introduces the concept of urban fractals and goes on to present a series of design and planning tools for achieving Sustainable Human Ecological Development SHED Combining knowledge from diverse fields to present a synthesis of urban ecology the book will provide a valuable resource for students researchers and practitioners in architecture construction planning geography and the traditional life sciences Sounds, Ecologies, Musics Aaron S. Allen, Jeff Todd Titon, 2023 Sounds Ecologies Musics poses exciting challenges and provides fresh opportunities for scholars scientists environmental activists musicians and listeners to consider music and sound from ecological standpoints Authors in Part I examine the natural and built environment and how music and sound are woven into it how the environment enables music and sound and how the natural and cultural production of music and sound in turn impact the environment In Part II contributors consider music and sound in relation to ecological knowledges that appear to conflict with yet may be viewed as complementary to Western science traditional and

Indigenous ecological and environmental knowledges Part III features multidisciplinary and interdisciplinary approaches by scholars scientists and practitioners who probe the ecological imaginary regarding the complex ideas and contested keywords that characterize ecomusicology sound music culture society environment and nature A common theme across the book is the idea of diverse ecologies Once confined to the natural sciences the word ecology is common today in the social sciences humanities and arts yet its diverse uses have become imprecise and confusing Engaging the conflicting and complementary meanings of ecology requires embracing a both and approach Diverse ecologies are illustrated in the methodological terminological and topical variety of the chapters as well as the contributors choice of sources and their disciplinary backgrounds In times of mounting human and planetary crises Sounds Ecologies Musics challenges disciplinarity and broadens the interdisciplinary field of ecomusicologies These theoretical and practical studies expand sonic scholarly and political activism from the diversity equity inclusion agenda of social justice to embrace the more diverse and inclusive agenda of ecocentric ecojustice
